The Cyberangel Gets A 5 Star Rating - Unique Security Product Continues To Impress

NASHVILLE, TN - (Send2Press Newswire) - November 5, 2003 -- CyberAngel Security Solutions, Inc. (CSS, Inc. - www.thecyberangel.com) continues to stake its claim to be a "best of breed" security tool. With excellent product reviews and a string of successful recoveries of stolen computers, The CyberAngel has become a proven name at protecting corporations and consumers from computer and data loss.

In the October issue of SC Magazine (www.scmagazine.com), a leading IT Security trade publication, a review of The CyberAngel Security Software produced their highest rating, 5 Stars. The CyberAngel Security Software has also just been reviewed by Relevant Technologies (www.relevanttechnologies.com), and once again, has passed all tests with flying colors. Time and time again, The CyberAngel Security Software proves to the industry that it is THE security solution for workstation security.

All across America, headlines tell the stories of computer theft, data compromise, and unauthorized access to corporate and government networks. According to the Computer Security Institute's 2003 Computer Crime and Security Survey, theft of private or proprietary information created the greatest financial losses. Laptop theft increased 52% in 2002, and financial loss due to theft was second only to virus damage. Corporate studies estimate the average cost of replacing a stolen computer to be in excess of \$89,000.00, with a high value placed on data compromise and resulting negative publicity.

The CyberAngel Security Software provides Real-Time security for a computer in the hands of a thief or unauthorized user. It encrypts and hides confidential or sensitive data, restricts unauthorized remote access or information transfer, and prevents proprietary applications from being accessed. It can be used as a compliance tool for HIPAA or Gramm Leach Bliley Privacy Acts, or just for protecting your personal banking or contact information.

The CyberAngel Security Software has been fighting computer and data theft for over 7 years, with recoveries recently in Portland, Chicago, Miami, Houston, Baltimore, Boston, and Atlanta. In many cases, we have recovered other items stolen along with a protected computer by virtue of our tracking and location abilities. This provides a huge value to the end-user. For more details about recoveries of stolen computers made possible by The CyberAngel, visit our Press Room at www.thecyberangel.com/pr.html .
