

Alien Apparatus Company Solo Performer Show Controller 2.0 Adds MIDI Control and More

PHILADELPHIA, Pa. (SEND2PRESS NEWSWIRE) – Alien Apparatus Company, Inc. releases Solo Performer Show Controller version 2.0. Solo Performer Show Controller is a system for controlling the background music, lyrics displays, MIDI effects, and light shows for musicians. The system consists of a six-button foot controller that connects to a computer via USB, and software that runs on Windows and Macintosh.

Solo Performer Show Controller plays mp3 files, aiff files, wave files, and MIDI files. It can control MIDI effects units, lights that operate using the industry-standard DMX512 protocol, and can display lyrics on-screen in a karaoke-like manner. The software also includes a utility for stripping out unwanted tracks in MIDI files so that only the rhythm tracks play.

In this new release, Solo Performer Show Controller can now send MIDI files to external MIDI devices, change MIDI effects settings automatically, send hotkey commands to control other running applications, and redefine the button functions on the foot controller.

The Solo Performer Show Controller System is currently the only system available for controlling a show that seamlessly integrates audio, MIDI, and DMX512 lighting capabilities. With its six-button foot controller, a guitar player could, for example, play a show in front of an audience and have all of the backing rhythm tracks play from the system while it controls the lights and changes the singer's vocal reverb during the choruses.

Solo Performer Show Controller is available for both Windows and Macintosh computer systems. For more information on the product, or to order online, visit www.alienapparatus.com.
