

Lumen Software Introduces Lumination(tm) Hyper-Portal – A New Portal Category Emerges

KANSAS CITY, MO – June 23 (SEND2PRESS NEWSWIRE) – Lumen Software (www.lumensoftware.com) announced today the creation of the next generation in Portal Technology; the Hyper-Portal. Lumen Software defined this new term within the Technology Industry to capture the multi-dimensional capabilities of the Lumination(tm) Hyper-Portal that expands well beyond standard portals.

“The Lumination Hyper-Portal is everything I have wanted in my 25 plus years in Information Technology,” commented Don Keeler, CTO at Lumen Software. “It has already been recognized as the next significant advancement in computing and for good reason.”

Lumination(tm) Hyper Portal provides a secure, fast executing (even over dial-up access) “virtual desktop” through a browser. This desktop is where a user is able to access their applications and data anywhere they have Internet access. The Lumination(tm) hyper-portal may be utilized on any desktop OS such as Macintosh, Windows, Linux, Unix, etc. The flexibility of access, minimal hardware and software requirements and the common “desktop

metaphor” for user navigation are just some of the key features that has propelled the Lumenation(tm) Hyper-Portal to the forefront so quickly.

“En Pointe is very excited to be involved with Lumen Software and the Lumenation Hyper-Portal. From our very first exposure to the system at Novell’s Brain Share 2005, we immediately recognized the capabilities of the system and are embracing the product,” commented Tom McFarlin, Project Manager for En Pointe, a Technology Solutions Provider serving over 3000 customers nationwide. McFarlin further commented, “We see the Lumenation Hyper-Portal working in every vertical we are involved in from Health Care to Education to Corporate America, plus the fact that an ERP Portal can be created using Lumenation’s wizard in a matter of minutes with no development is unheard of in the industry.”

The Lumenation(tm) Hyper-Portal provides education, government, businesses and even home users with the ability to significantly increase the useful life of their computers, while reducing the number of desktop software applications they must purchase. The result is a reduction in software and hardware cost while at the same time increasing functionality and enabling access options (Internet / Intranet) typically reserved for large organizations with deep pockets.

To provide greater depth with the Hyper-Portal, Lumen Software provides its own rapid application development environment, LightBulb, which provides even non-programmers the ability to create applications which meet standard medical, education and department of defense guidelines. Even multiple language support (Localization) by user profile is inherent in the Lumenation(tm) environment.

About Lumen Software

Lumen Software(tm) is redefining how users utilize computing to get things done. Over 25 years of experience in the fields of software development and integration, with a unique knowledge base empowering clients with the ability to capitalize on "thin computing." Lumen products do not require any software to be downloaded on a workstation. Users can access files and applications from the Internet or Intranet utilizing one single sign-on into a "virtual desktop" environment. One Click, One World... Anytime, Anywhere.

Lumen Software is wholly owned by GeKL Technologies, Inc. LightBulb, Lumenation Hyper Portal, all associated Modules, and S2D are all trademarks of GeKL Technologies, Inc.
