

# Largest Transportation Services Company Selects WinBill for IT Expense Management

WALNUT CREEK, CA (SEND2PRESS NEWSWIRE) – TeleManagement Technologies, Inc. (TTI – [www.winbill.com](http://www.winbill.com)), the leading Telecom Expense Management Company today announced that one of the largest transportation services companies in the world has signed an Agreement to implement WinBill to identify and manage all of their IT expenses. The company issued an RFP in February 2005 with the original intent to outsource their telecom expenses. After a thorough review of all the responses to their RFP they elected to purchase the WinBill software system to effectively inventory, allocate and manage their IT expenses.

“One of the many deciding factors in selecting WinBill was TTI’s domain expertise and the software’s ability to automate many of the current manual billing processes such as data entry of vendor billing and AP data entry. As part of the research process we spoke with and visited several WinBill customers. After discussing with them the outsourced proposals it became very apparent that bringing our IT Expense Management in-house would save us time, money and give us access to billing information on demand. In addition to WinBill automating our current manual processes we will benefit from having a robust, scalable software application that provides us with an accurate inventory of all voice, data and cellular services for our entire enterprise. We anticipate that using WinBill will provide our company with significant time management and savings with our IT expenses. By consolidating all IT inventory and expense information into the WinBill system, the entire corporation will have the ability to view, analyze and report on their inventory and spend at any time, from anywhere,” stated the Director of IT Finance.

By consolidating all services with the WinBill application they anticipate savings of at least 15% within the first year.

## WinBill IT Expense Management Software Solution

WinBill’s revolutionary software product has saved Fortune 500 companies millions of dollars managing their IT expenses. Since 1987, WinBill has enabled corporate enterprises to virtually eliminate billing errors, end late payment fees, negotiate better contract rates, increase productivity and automate their IT expense management process. With its powerful Inventory and Reporting tool, WinBill customers electronically import carrier billing information in minutes. All expense information is automatically exported to any A/P & G/L system to eliminate double data entry and save time paying IT bills.

TeleManagement Technologies Inc.
