

Discus Dental Selects M2SYS Enterprise Fingerprint System

Leading Dental Practice Management Software Firm to Integrate M2SYS Biometric Fingerprint System to Address Practice and Patient Security Concerns

ATLANTA, GA (SEND2PRESS NEWSWIRE) – M2SYS Technology, an innovator in biometric technology research and development, announced it has finalized a long-term partnership agreement with Discus Dental, Inc., the leading manufacturer and seller of dental products and services for the dental healthcare industry, to integrate and distribute the M2SYS patent-pending fingerprint recognition solution called Bio-Plugin(TM) within the Discus Dental Software practice management suite. The solution is now available to Discus Dental's expansive global customer base.

“Data protection is of paramount importance to a dental practice – and it’s not only patient data for confidentiality reasons, but it’s also practice financial data that needs to be protected. Adding fingerprint security capabilities to our practice management software makes it one of the most secure solutions available in the marketplace. We found that M2SYS provided the highest level of biometric security from all those we evaluated,” explained Discus Dental Software General Manager, Bruce Lieberthal, DDS. **(Photo Caption: M2-S Fingerprint Reader.)*

OMSVision, the Discus Dental Software’s solution for oral and maxillofacial surgeons, was developed hand-in-hand with the AAOMS Task Force on Software Development. OMSVision is the only practice management solution recommended by the AAOMS. Discus offers a collection of innovative solutions that enhance software functionality including web-based patient communications, pre-registration functions, e-claims, referral management, comprehensive management reporting and marketing communication tools.

“M2SYS is a great addition to our list of technology partners and integrating their biometric solution into our practice management software affirms our mission to provide only the best products to our clients,” said Lieberthal, “M2SYS delivered an extremely robust fingerprint recognition system along with support and assistance that made the integration process efficient and smooth.”

Bio-Plugin(TM) enables software companies to quickly integrate a complete, seamless fingerprint recognition system, including a high-performance 1:N identification engine. Bio-Plugin(TM) eliminates the system dependencies,

extensive development, and specialized knowledge of biometric complexities inherent to fingerprint technology SDKs. This enables software companies to remain focused on their core products, while establishing a new revenue channel with the addition of an integrated biometric component.

“The agreement between Discus and M2SYS continues to demonstrate the effectiveness of our patented integration technology, and once again confirms the M2SYS fingerprint recognition system is the solution of choice for industry leading software providers,” commented Michael Trader, President of M2SYS. “By using Bio-Plugin(TM), Discus saved considerable development time, enabling them to rapidly deploy a first-class biometric system, while remaining focused on their core applications. Additionally, Discus is gaining a technology partner in M2SYS that is focused on continually providing unparalleled, cutting-edge biometric solutions.”

About M2SYS Technology

M2SYS Technology, www.m2sys.com, is a proven innovator in the field of biometric software engineering, research and development. Its portfolio includes a patent-pending, biometrics “plug-in” solution that software providers can use to quickly adopt a seamless fingerprint recognition module with minimal development effort. Leveraging its core biometric processing server, the technology facilitates one-to-one verification and one-to-many identification, enabling fast, secure, and highly accurate human recognition processing.

About Discus Dental, Inc.

Founded in 1993, Discus Dental, Inc. is a leader in the marketing and worldwide distribution of premium clinical and aesthetic products to dental professionals and leading edge oral care products direct to consumers. The company also provides state of the art practice management software, practice building tools and services as well as expert industry training for the dental community. Discus Dental is headquartered in Culver City, California. More information is available at www.discusdental.com.
