

# My Tattoo ID Makes Bar Code and Compliance Labeling Affordable to Small Business

MANSFIELD, MA (SEND2PRESS NEWSWIRE) – Integrated Software Design, Inc, the leader in bar code and labeling software announces the release of My Tattoo ID an affordable solution for small businesses seeking to design and print bar coded labels, signs and forms on demand. My Tattoo ID allows users to design professional labels with color, text, pictures, shapes and UPC, EAN, Code 39 or Postnet bar codes. It is simple to use and includes many features previously found in only the most expensive software packages.

My Tattoo

ID gives users the ability to include constant data, serial numbers, dynamic data from text files, date and time or enter dynamic information from the keyboard at print time. In addition, it lets users link multiple fields on the label and have them print as one. My Tattoo ID users can also rotate bar codes, pictures and text to virtually any angle.

Unlike other bar code and labeling software that only displays one label at a time and require that all labels on a page be the same, My Tattoo displays multiple labels of different types on the same page. It also lets users save information in a scratch area off of the label.

My Tattoo ID saves time by letting users save constant information and simply fill in variable information at print time. It saves money by assuring that companies meet all internal and external bar code and labeling requirements 100% of the time.

“Our clients have been asking for a low cost bar code and labeling software package that does not compromise features and quality for a long time. My Tattoo is a tremendous value,” says Phyllis Zaiger, V.P.
