

American Delphi Academy Reports Bird Flu Pandemic Fueled by Earth Changes

New 15-year study confirms environmental stress impacts global wellness

SPOKANE, WA – April 19 (SEND2PRESS NEWSWIRE) – American Delphi Academy (www.johnjayharper.com) reports we are observing the creation of a super strain of the H5N1 avian influenza virus, so-called “bird flu,” that has the potential to kill millions of animals and humans, as earth changes. According to the World Health Organization (WHO), the U.S. Department of Health & Human Services (H&HS), and the Centers for Disease Control and Prevention (CDC), a recipe for disaster is in the genetic-mixing stage for manifestation worldwide.

But why now is the question? The indications are that our environment is under extreme stress and is shutting down to compensate, as do all living organisms. Distinguished cellular biologist Bruce H. Lipton, Ph.D., formerly with Stanford University School of Medicine, writes in *The Biology of Belief*: “In fact, stress hormones are so effective at curtailing immune system function that doctors provided them to recipients of transplants so that their immune systems wouldn’t reject the foreign tissues.”

More so, a new report suggests that consciousness researcher John White was correct when he wrote 25-years ago in *Pole Shift*: “The many ‘crimes against nature’ that people are perpetrating-over-population, environmental pollution, wasting of nonrenewable resources, nuclear testing-along with ‘crimes against humanity’ such as war, economic exploitation, the imposition of inhumane living conditions, religious persecution, political abridgement of human rights, intolerance and bigotry toward minorities, etc., are all pouring negative thought forms into the planet’s energetic foundation. The result will be geophysical cataclysm: earth changes and a pole shift.”

Now comes the latest warning from medical research scientist Dr. John Jay Harper who claims he has rediscovered the meaning to the myths of the Mayans and Egyptians. They are describing our planet’s relationship to 26,000-year “sunspot cycles” and its “magnetic” pole shift, he says. Through a 15-year metanalysis of anthropology, archaeology, astronomy, astrology, physics, psychology, biology, history, mathematics, and medicine, Dr. Harper documents that our own civilization is likewise entering into that same stage of shift in Solar Cycle 24 with its peak circa 2012. Indeed, as James D. Hays of the Lamont-Doherty Earth Observatory confirms, “The evidence suggests that environmental change is connected with the reversal of the earth’s magnetic field.”

Dr. John Jay Harper is a retired electronics engineer, computer specialist, and clinical mental health counselor with the U.S. Department of Defense. He resides in Spokane, Washington where he is the executive director of a non-profit, the American Delphi Academy.
