

Protect Yourself From Poker Cheats with PokerBodyguard

PokerBodyguard, a new product from Advanced Interactive Marketing, Inc., cracks down on cheaters in online poker rooms

CHICAGO, IL – May 10 (SEND2PRESS NEWSWIRE) – Online poker players: you need never be cheated again! PokerBodyguard, a new freeware product from Advanced Interactive Marketing, Inc. (AIM), works to ensure that other online poker players do not rip you off.

Send2Press® Newswire “Although

many people don’t know it, cheating in online poker rooms is rampant, and first-timers in particular get cheated all the time,” says Larry Brunken, Founder of AIM. “PokerBodyguard makes poker playing in online gaming forums even safer than real-world casinos and poker rooms.”

PokerBodyguard (available for download at <http://www.StopPokerCheaters.com>) works with most online poker rooms. Players using the software can determine, at a glance, the history of fellow players – how often they play together, how many tournaments they have won, whether they have been reported as rude and abusive, etc. The program also blocks poker Trojans and poker viruses from hacking into your computer by erecting a robust firewall.

Apart from instant poker protection, PokerBodyguard also allows users to watch instant replays of all online games, with a feature to fast-forward and rewind as with DVDs. Players can take notes on other gamers and share poker

games with friends using a built-in file-share system.

The PokerBodyguard download also includes other free programs such as CustomXML, a powerful XML and RSS aggregator, MySearchBot, a tool to tap multiple search engines and share search results, and SystemBodyguard, which protects personal computers from online threats.

“With one download, this freeware product gives you online protection and efficiency as never before,” says Brunken. “Poker players in particular can play their favorite game online with an enhanced sense of freedom and enjoyment.”

About Advanced Interactive Marketing, Inc.

Advanced Interactive Marketing, Inc. was formed in 2005 by Larry Brunken to produce a group of new free software applications. With nine years experience in the online marketing business, Brunken and AIM will release groundbreaking free products for both end users and online marketers.
