WebSafe, Inc. Announces Release of the MyMedSafe Feature

BIRMINGHAM, AL — June 30 (SEND2PRESS NEWSWIRE) — WebSafe, a provider of a secure, Internet based filing system, today announced the addition of the MyMedSafe feature. MyMedSafe offers subscribers the ability to store personal medical information for retrieval in emergency situations. WebSafe customers using MyMedSafe can carry a card in their wallet with an emergency retrieval code which allows Internet access to their medical information including immunizations, allergies, personal medical history, emergency contacts, health care directives, etc.

Send2Press® Newswire

"MyMedSafe is a valuable new feature of WebSafe which guides the user through entry of necessary medical information," said Donald B. Moore, WebSafe's Director of Business Development. "This information can then be accessed by emergency care providers and by an individual's personal physician. MyMedSafe will be the first of several new specialized content features available through the WebSafe solution."

He added, "By the end of the summer, we plan on introducing MyWealthSafe to subscribers with content provided by Stewart H. Welch, III, a noted financial planner and author. Natural disasters such as hurricane Katrina have spurred demand for solutions which preserve important data and make it accessible during emergencies. We believe that consumers will benefit from WebSafe's secure encrypted storage coupled with the content we provide."

About Websafe, Inc.

Customers use WebSafe to store important information such as scanned images, word processing documents, spreadsheets, etc. on secure servers located at Southern Telecom, a wholly owned subsidiary of Southern Company. Users can then access this information via an Internet connection from anywhere in the world. To ensure the highest level of security, WebSafe encrypts all information both in transit and while stored. "Keys" can be given to family members and advisors, allowing the sharing of important information.

WebSafe also offers the ability to automatically backup critical information on a scheduled basis into the Customer's safe. More information: www.websafe.com
