

# Software Security Solutions launches distribution of Outpost Firewall Products

LAKEWOOD, Colo. – Oct. 17 (SEND2PRESS NEWSWIRE) – Software Security Solutions is making it easier for US computer resellers, office-supply retailers and computer users to get one of the world's best PC firewall programs. A specialist in providing computer and Internet security software, Software Security Solutions has added to its product line Outpost Firewall Pro (for individuals and small businesses) and Outpost Network Security (for networked installations), created by the computer security experts at Agnitum Ltd.

Software Security Solutions was named Master US distributor for Outpost Firewall products and will build a reseller sales channel to support the US and Canadian markets. Products are now available to test and purchase via the new Outpost web site, operated by Software Security Solutions. Reseller and Affiliate applications are available on the partner page of this site.

Outpost Firewall Pro 4.0 is a personal PC firewall that delivers on Agnitum's promise of powerful proactive protection that's easy to use. With its integral anti-Spyware and attack detection capabilities, Outpost defends applications and data against the most determined cyber criminals; it even protects silently in the background when users are watching movies or playing online games. The advanced information leak protection passes all publicly-available leak tests (tests that are designed to mimic hacker attempts to steal data from a PC). Outpost Firewall Pro also protects itself against Malware that is designed to disable security software.

All this power is easily managed with the help of the Improvenet community of Outpost users and Agnitum security experts. Improvenet automatically delivers the correct rule sets for most common applications – both for Internet access and local PC interaction – from data submitted by users and verified by Agnitum's security experts. When users do see a prompt from the firewall for information about application access permissions, the built-in Smart Advisor is there to quickly help them make the right decisions.

Outpost Network Security is designed to protect businesses by providing centrally deployed and managed personal firewalls for the networked environment. It delivers reliable, transparent protection to both desktop and mobile PC users, along with easy-to-use central controls for IT administrators.

"Independent reviews show Outpost has quickly advanced past most of the competition in terms of ease of use, out-of-the-box protection, and flexibility while using fewer resources than major competitors," said Monte Robertson, president of Software Security Solutions. "Agnitum is a thought leader in PC Firewalls and that makes it a good fit for the Software Security Solutions model."

### **About Software Security Solutions**

Since 2001, Software Security Solutions ([www.SoftwareSecuritySolutions.com](http://www.SoftwareSecuritySolutions.com)), has been simplifying computer security for consumers and small businesses by advocating a Layered Security Solution. Our company researches threats and solutions as they emerge, to ensure our customers have layered, best-in-class protection, all from a single source.

### **About Agnitum**

Founded in 1999, Agnitum Ltd. ([www.agnitum.com](http://www.agnitum.com)) is committed to delivering and supporting high-quality, easy to use security software. The company's products are Outpost Firewall Pro, securing personal and family desktops, and Outpost Network Security, ensuring reliable endpoint protection and performance for small business networks. Agnitum firewall technology is licensed and used by Novell, Sophos and Lavasoft.
