

INTELLIscribe Enhances Windows Printing

IDAHO FALLS, Idaho – Mar. 8 (SEND2PRESS NEWSWIRE) – Brooks Internet Software, Inc. introduces INTELLIscribe(R) (lpr.brooksnet.com) version 4.0. INTELLIscribe, designed to make document distribution and printer management simple and inexpensive, continues to improve out-of-the-box Windows(R) printing.

Photo Caption: Version 4.0 brings INTELLIscribe's broadcast, failover, destination balancing, and round robin printing features to Windows Vista and Windows cluster environments.

Used frequently in the news media sector, INTELLIscribe is well known for its broadcast print feature where simultaneous printing of the same document can be achieved on multiple networked printers. This document distribution feature of sending to multiple printers brings to life several configured print destinations at one click of the mouse; the end result is an efficient and stable printing solution that meets the requirement of a shared real-time, broadcast print environment.

A free, easy to install 21-day trial of INTELLIscribe is available for download at www.brooksnet.com/download-intelliscribe.

It is fully supported on Windows 2000, Windows XP, Windows Server 2003 and Windows Vista operating systems.

About Brooks Internet Software, Inc.

Founded in 1995, Brooks develops TCP/IP network printing solutions that allow Windows-based computers to print to and receive data from non-Windows computers: INTELLIscribe for sending print requests, RPM Remote Print Manager(R) for receiving host print requests, and ExcelliPrint(R) for receiving AFP/IPDS print requests from IBM mainframe and midrange servers.
