

LuraTech Debuts Industry's First Complete PDF/A Product Portfolio for Enterprise Content and Document Management at AIIM Conference and Expo

LuraTech uniquely applies the most proven b/w and color scanned document compression technology to their leading PDF/A solution

BOSTON, Mass. – Apr. 17 (SEND2PRESS NEWSWIRE) – LuraTech, Inc., a leading provider of open, ISO-compliant JPEG2000 and PDF/A technology, launched new enterprise content and document management products at the AIIM Conference & Exposition, April 16-19, 2007. PDF/A (or PDF/Archive), enables organizations to archive documents electronically, with assurance of content preservation over an extended period of time; and guarantees enterprises the ability to retrieve and render these electronic documents despite the future technical landscape.

Last year, LuraTech was first to introduce a PDF/A solution for scanned documents via their LuraDocument PDF Compressor, which compresses color and bi-tonal scanned documents into extremely small files. This year, LuraTech extends the PDF Compressor by adding digital signature capabilities. Now with one software package, organizations can compress, OCR and digitally sign scanned documents while archiving them to the PDF/A standard format.

Additionally, LuraTech is debuting two new products which extend their PDF/A product portfolio: the LuraDocument PDF/A Printer and LuraDocument PDF/A Validator. The LuraDocument PDF/A Printer converts electronic documents, e.g. MS Office files or CAD drawings, into ISO compliant PDF/A files. The PDF/A Validator checks and certifies all PDF files against the PDF/A standard during the archival process.

“We’re confident that AIIM attendees will embrace this product line,” states Carsten Heiermann, LuraTech’s CEO. “The introduction of technologies capable of creating PDF/A’s from scanned and born digital documents, provides enterprise and document management customers with everything they need under one roof. They were the missing pieces of our product offering.”

LuraDocument PDF Compressor: New Features

- * Digital signatures for PDF, PDF/A output

- * 25% faster OCR processing for color scanned documents
- * More options to merge and repackage input files into one PDF, PDF/A file

LuraDocument PDF/A Printer: Key Features

- * Creates PDF/A documents from any application that interfaces with print drivers
- * Outputs PDF/A documents “on-the-fly” as end users print
- * Installs as a printer driver at desktops or servers for easy management and integration

LuraDocument PDF Validator: Key Features

- * Checks PDF documents against the complex set of PDF/A requirements
- * Logs errors concisely when PDF documents fail certification allowing for fast corrective action
- * Easily integrates into archival process workflow

All LuraDocument tools easily integrate into capture and archive workflow since they are offered in a variety of versions, from simple, desktop packages to command line tools and SDK's (software development kits).

About LuraTech

LuraTech is a leading provider of open, ISO-compliant JPEG2000 and PDF/A technology. LuraTech makes image and document compression, archiving and delivery a reality for public and private sector organizations by delivering easy-to-implement, open-standard imaging products, coupled with enterprise-class service and support.
