deverus, Inc. Launches LightSpeed Background Check Technology Performance Enhancement

AUSTIN, Texas – June 8 (SEND2PRESS NEWSWIRE) – deverus, inc., the leading provider of software, integration technology, and strategic services for the background screening industry, today announced the latest breakthrough in background technology with its new speed performance solution, called LightSpeed, geared towards dramatically improving end user web experiences while ordering background checks.

Send2Press® Newswire

A traditional background check pulls a considerable amount of encrypted data from different sources, compiles them into reports, and then stores them on security protected systems for review. Encryption, web browser protection, and general IP security has made this process slow and cumbersome for the average user. Using the Internet, most end users of the data report slow page loads and long delays in getting the right information to make hiring decisions.

It seems like a simple problem to fix. However, due to the amount of data combined with the new strong security measures around background checks, pulling up information in a timely manner has been anything but easy. Large

reports have taken anywhere from 15 to 50 seconds to review. deverus has worked diligently to improve the viewing time of reports realizing that with 30,000 HR end users, a few seconds of time can result in enormous inefficiencies in worker productivity.

The technology developed by deverus called LightSpeed uses advanced compression algorithms, optimized CPU request handling, built in caching, and dynamic content control. The result is faster, more efficient page loads, data storage, report retrieval, and ultimately, a dramatically more productive experience for HR.

"We are excited to further enhance the deverus experience for our users as well as improve the overall technology performance in our industry. At the end of the day, HR wants to put the right person on the job as fast as possible," says Brent Breshers, deverus Director of Technology. "To do this they need the right information at their fingertips, fast. Delays in pulling up reports over the Web can make the process seem inadequate and HR unproductive. LightSpeed insures that our customers are providing the best technology that gets HR results on time."

About deverus
Founded in 1998, deverus is the leading provider of software, integration technology, and strategic services for the background check industry. From system-to-system integration, customized and off the shelf enterprise level applications, to sophisticated tools that manage the information supply chain, deverus enables background check companies to dramatically lower operating expenses and increase revenues by connecting to customers, employees, and information sources online, anytime, from anywhere.
