Atreus Integrates BEA AquaLogic(R) BPM with IMS Provisioning Solution

Atreus Adds Critical Service Orchestration Capabilities to Its IMS Provisioning Solution

CHICAGO, Ill. — NXTcomm — June 20 (SEND2PRESS NEWSWIRE) — Atreus Systems(TM), the leading supplier of provisioning software for IMS-based services, today announced that Atreus has integrated the BEA AquaLogic(R) BPM suite into its xAuthority IP Service Provisioning platform. This integration is designed to help service providers to readily blend complex IMS services and to create new user-centric portal applications so that they can dramatically reduce the time to market launch.

The integration represents technical work completed under the alliance Atreus and BEA announced around BEA Liquid Services Framework on May 21, 2007. Atreus and BEA are slated to conduct demos of the integrated solution in the BEA booth (#1539) at NXTComm in Chicago.

BEA AquaLogic BPM Suite is a leading software suite that is designed to integrate the modeling, implementation, execution and monitoring of end-to-end business processes to help support continuous optimization of the entire business process lifecycle. BEA AquaLogic BPM Suite is designed to move beyond the limitations of traditional human workflow and process technology and to augment the power and extensibility of system-to-system enterprise application integration software by bridging the two together into a single suite of software that can be used to support the complex, collaborative business processes of today's heterogeneous enterprise.

By integrating the BEA AquaLogic BPM Suite into Atreus' xAuthority IP Service Provisioning platform, Atreus can give service providers access to powerful new service orchestration capabilities designed to help them succeed. The integrated solution can help speed the creation of new customer-centric portal applications, such as service sign-up wizards and self-care portals, facilitate the bundling of complementary IMS-based services, and support rapid, standard-based integration with a range of back office and partner systems.

"There is a strong need for a software platform that can help providers take services from diverse sources-SDP vendors, IMS vendors, and third-party developers-and blend them together flexibly to meet the changing needs of an increasingly sophisticated market," said Doug Bellinger, CTO, Atreus Systems." The new agreement with BEA is designed to provide Atreus customers with powerful new service orchestration and provisioning capabilities that can help them combat competitive forces and generate critical new revenue

streams."

"Marrying the provisioning excellence and expertise of Atreus with AquaLogic's industry-leading service orchestration capabilities represents a winning combination that is designed to help service providers improve time to market for innovative new IMS-based services," said Shane Pearson, vice president of marketing and product management at BEA Systems.

Visit Atreus at BEA's booth #1539 at NXTcomm in Chicago, IL from June 19-21, 2007

Learn how Atreus and BEA are helping to empower service providers to develop and deploy revenue-generating VoIP, mobile, and IMS applications rapidly and cost-effectively.

The Atreus-BEA solution is both flexible and extensible and is designed to give providers many compelling service management benefits:

   * industry standard APIs designed to facilitate rapid integration with
   SDPs and critical back-office systems;

   * customer-proven, out-of-the-box workflows for provisioning IMS
   applications, including IP Centrex, SIP Trunking, Hosted Call Center,
   Mobile PBX, Unified Messaging, etc.; and

   * flexible, standards-based integration designed to reduce time-to-market
   and cost-of-integration.

About Atreus Systems
Atreus Systems(TM) is the leading supplier of provisioning software for VoIP and IMS-based services. As the vendor of choice for the world's most successful providers, Atreus has provided activation solutions for KPN, Qwest, Telus, Centennial, Spirit Telecom, and Bell Aliant. Atreus has formed strategic partnerships with BEA, Alcatel-Lucent, BroadSoft, Ericsson, Level 3, Oracle and Sonus, delivering carrier-class service provisioning with customer self-management.
