

RENNtech Becomes an Authorized DITEC Center

DELRAY BEACH, Fla. – Aug. 28 (SEND2PRESS NEWSWIRE) – DITEC International, a paint preservation and protection company focused on providing cars, airplanes, motorcycles and boats with protection and preservation services, announced today that the company has entered into an agreement with RENNtech, one of the nation's foremost authorities on high-end performance cars, which certifies RENNtech as an authorized DITEC Service Provider. This certification gives RENNtech an additional competitive edge in the aftermarket performance industry.

Send2Press® Newswire

Since 1989, RENNtech's focus has been the engineering and development of superior aftermarket performance products for Mercedes-Benz, offering their customers 700 hp supercars that are every bit as refined and reliable as a "factory" Mercedes.

"It really is an amazing process, the engineering behind the products is just fantastic. The most important thing for RENNtech is to provide a fully integrated tuning package that makes the car perform better, look better, and, ideally, work better. DITEC offers a product that does all of that, and stands behind its product with a six year warranty. Ditec's approach fits well with RENNtech's motto of 'performance without compromise,'" explains

Hartmut Feyhl, RENNtech's president and former technical director at AMG North America.

"Over the years, RENNtech has built many incredible cars that pushed the boundaries of performance, and has done so with only the highest quality materials and service," offers Christopher Alison, President of DITEC International. "RENNtech's clients expect the best and we are the only company of our kind to offer a paint preservation system that has been tested and endorsed by the Swedish National Testing Institute (Europe's most respected testing institute), the European AAA, and many others – all of which took many years of testing. Both RENNtech and DITEC are leaders in their fields, and combining the world's most endorsed paint preservation system with the best high-performance tuning company simply makes that leadership undisputed."

About DITEC Paint Preservation System

DITEC Paint Preservation System was first introduced in Denmark in 1975. Since then DITEC has enhanced and developed its products and services. DITEC's products represent the highest quality of protection and are available only at Authorized DITEC Centers worldwide. With over three decades of experience and hundreds of certified centers, DITEC Preservation System has proven to be the only reliable paint preservation system in the world. DITEC's products and services are provided in Sweden, Norway, Germany, Finland, Switzerland, Denmark and Portugal and are now available in the US with 5 outlets in Florida.

DITEC increases the gloss value on a new car 20-40% and adds clearly visible higher luster and shine. DITEC reduces the cost of maintenance up to 90%. The cost for wax and polishing are completely eliminated. A DITEC preserved vehicle does not get as dirty and needs to be washed 40-70% less often.

From an environmental point of view, DITEC products are organic and contain no synthetic substances such as Teflon/PTFE and Silicon. DITEC reduces and in many cases eliminates the use of harmful chemicals, saves water, reduces the air resistance on the vehicles and provides better fuel efficiency and therefore better gas mileage.

Once DITEC has been applied on the paint, it never needs to be waxed again. DITEC protects the paint against oxidation, sun-burn, corrosion, rust. DITEC Services are provided with 6-year system guarantee.
