

# PreViser Launches New Website and Enhanced Version of its Oral Disease and Risk Assessment Software

MOUNT VERNON, Wash. – Sept. 24 (SEND2PRESS NEWSWIRE) – PreViser Corporation ([www.previser.com](http://www.previser.com)), a world leader in risk and disease analysis software that enhances treatment planning for patients affected by oral disease, announced a simultaneous release of a new corporate website and a major upgrade to its software.

Send2Press® Newswire

PreViser's version 3.0 software is now both Windows- and Macintosh-compatible, and includes improved treatment recommendations, simpler networking setup, and the ability to translate the program into non-English languages by licensing partners.

PreViser CEO Carl Loeb noted, "This major upgrade of our analytic software tools incorporates changes driven by data and feedback collected from dentists using the technology in over 26 countries worldwide. The Japanese version released there in November 2006, is widely used. Localized versions for the United Kingdom, Ireland, and Israel are coming soon."

The new version adds a new report correlating a patient's current periodontal

health status to American Academy of Periodontology guidelines for treatment planning.

PreViser also released a significantly enhanced corporate website that features user-friendly learning resources, including videos and sample reports generated by the software. Customers can view specific videos showing how to easily implement PreViser tools to save time, enhance their hygiene programs, improve patients' understanding of treatment plans, and increase patient satisfaction. Videos are online at [www.previser.com/demo.html](http://www.previser.com/demo.html).

Loeb stated, "We are very excited about our new website. It includes specific messaging for different clinical professionals within dentistry, plus new videos that simplify understanding of the effects of incorporating PreViser technology into the dental practice. We believe a dentist using our software can produce optimized clinical results, while achieving optimum productivity at the same time. Our new website significantly improves our ability to effectively bring this message to clinicians."

PreViser analytic software gives dental clinicians an easy-to-use, objective, and reproducible way to measure and communicate patients' oral disease and risk as simple numeric scores. Reports track changes over time, allowing clinicians to evaluate treatment effectiveness and outcomes. The free software generates reports on periodontal risk and disease, and risk of oral cancer, caries, tooth fracture, and root damage.
