

Photographic Fine Art Lamps Feature New Environmentally Responsible LED Lighting

CARPINTERIA, Calif., Feb. 26 (SEND2PRESS NEWSWIRE) – Holland Scott Gallery today announces the debut of the Environmentally Responsible Green Energy Fine Art Lamps. These lamps combine energy-efficiency technology with fine-art design. Elegant photographic floral images and art-deco linoleum patterns from the 1930's are the result of energy efficient LED (Light Emitting Diode) lamp technology and the Giclee (zhee-clay) fine-art printmaking process.

Send2Press® Newswire

The Giclee printmaking process uses permanent archival vegetable die inks on the cylindrical illuminated photographic image. Additional lamp designs are in production.

Omnidirectional, these LED lamps provide the correct color temperature of daylight for displaying naturally brilliant photographic colors. They also generate no heat and are free from harmful ultraviolet (UV) rays that may cause fading over time. More importantly, LED lamps use 80 to 90 percent less energy than the incandescent lamps they replace.

Inventor and artist, Candy Hawthorne, along with her husband and art dealer,

Scott, also a professional photographer and a true-digital art pioneer, are the brains behind the first Green Energy Fine Art Lamps. They have been creating art mediums with computers and technology since 1978.

Scott is a designer and creative evangelist; his contemporary photographic works are represented in each lamp he designs.

“The natural photographic beauty is complemented with the soft LED lighting; these new lamps look spectacular,” Scott said. “The eco-friendliness of the new lamps is also very exciting.”

The new long lasting LED lighting is provided by LEDtronics, one of the leading LED lighting design and manufacturing companies in the U.S.

About the Holland Scott Gallery:

The Holland Scott Gallery (www.hollandscott.com) showcases Santa Barbara area contemporary artists and is a creative gallery where art and design begins as research, and evolves into artistic and commercial appeal. The Holland Scott Giclee Fine Art Printmaking uses state-of-the-art digital imaging technologies to produce limited edition prints.

About LEDtronics:

Since 1983 LEDtronics (www.ledtronics.com) has been the leader in designing and manufacturing environmentally friendly, low-power usage, long-life LED bulbs and LED lamps as a direct replacement to incandescent bulbs.
