DAXKO Partners with M2SYS to Offer Fingerprint Software Solution to YMCAs

Leading Provider of YMCA Operations Software Delivers More Customer Value and Offers Increased Security with Fingerprint Biometrics Technology

ATLANTA, Ga., March 25 (SEND2PRESS NEWSWIRE) — M2SYS Technology, an award-winning biometric technology research and development firm, announced today that it has finalized an agreement with DAXKO, a leading provider of operations software and services to the YMCA market. The agreement will benefit YMCAs and their members by speeding the flow of critical information and increasing the efficiency of operations, enabling YMCAs to focus their attention on providing exceptional facilities and serving the community more effectively. Through its partnership with M2SYS, DAXKO will offer the Bio-SnapON(TM) fingerprint software solution as an add-on to its DAXKO Operations software application.

Bio-SnapON(TM), a complete fingerprint biometrics software system, enables companies like DAXKO to rapidly add a fingerprint recognition component to their existing applications with no development work; allowing them to remain focused on their core products, establish a new revenue stream, and provide their customers with a rapid solution to their fingerprint needs.

"Accurate identification is a critical issue for member-based businesses," states Michael Trader, President of M2SYS. "The addition of our fingerprint biometrics technology to DAXKO's membership management software will increase security and reliability while decreasing the time needed to manage member information, enabling YMCAs to spend less time on data management and more time on providing a safe environment for family and youth activities."

"Reliable membership identification has always been an area of concern for the YMCA and we recognized the need for a secure identification solution that could be added to our membership management software," says April Benetollo, VP of Sales and Marketing for DAXKO. "After carefully reviewing the available solutions in the marketplace, we selected Bio-SnapON because of its ability to be deployed with no additional development time. Our customers are excited about the cost savings and efficiency that the M2SYS scanners bring to the member check-in process."
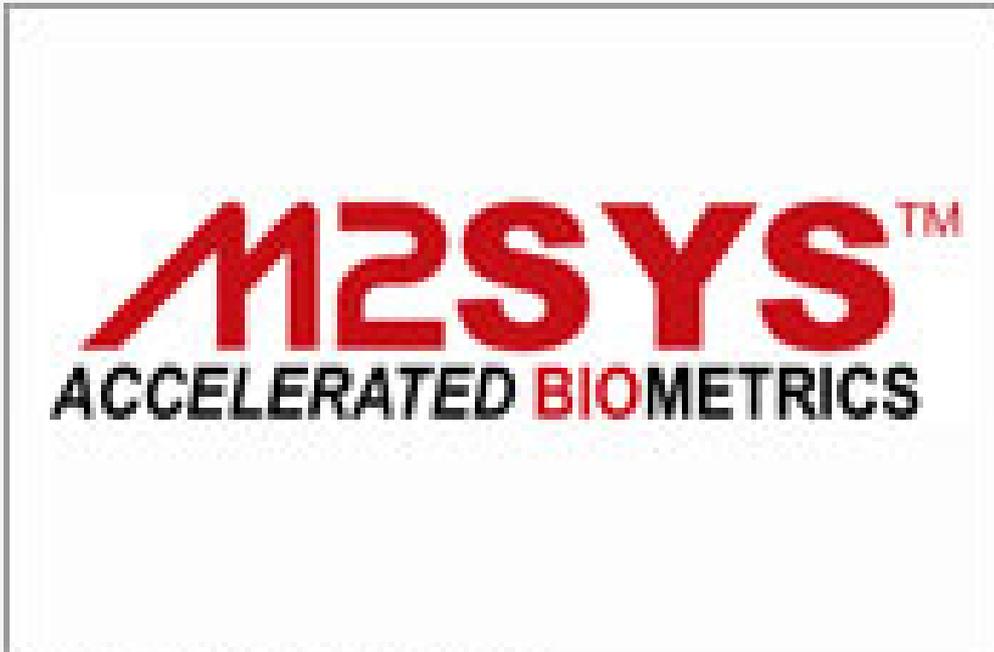

About M2SYS
M2SYS Technology, www.m2sys.com, is a recognized industry leader in fingerprint identity management technology, delivering a wide variety of customized, fully functional, turn-key fingerprint software solutions for

businesses and consumers.

About DAXKO
DAXKO, www.daxko.com, develops on-demand software solutions for organizations with high volumes of members, programs, and services, and is now the leading provider of operations software and services in the $4.6 billion YMCA market.
