

Revolutionary Pump Delivers Material Up to 600 Feet

ANNISTON, Ala., Dec. 10 (SEND2PRESS NEWSWIRE) – Blastcrete Equipment Co. has introduced the new Model HBS 1500 mixer pump for long distance and high pressure pumping of gypsum flooring, fireproofing and 1/2 inch aggregate shotcrete and concrete repair materials. This 4 inch hydraulic ball seat pump will pump sanded gypsum flooring materials using a 1.5 inch delivery line up to 600 ft. at outputs up to 130 bags (12 cubic yards) of material per hour.

“This device changes everything about how this type of technology can be used,” says Jim Farrell, President of Blastcrete. “Now you can safely pump shotcrete and concrete 600 feet at a speed that will increase builders’ efficiency worldwide.”

The HBS 1500 features a 12 cubic ft. hydraulic spiral mixer with hydraulic dump and a 30 second mixing time. The 26 cubic ft. receiving hopper includes a hydraulic agitator and hydraulic dump for quick and easy cleaning of the pumping cylinders. The 4 inch ball seat assembly is attached to the receiving hopper and flat pack with heavy duty clamps which can be quickly and easily disassembled for cleaning or making routing repairs.

The ball seat pump offers much lower maintenance costs than comparable rotor stator pumps with the average repair cost at less than \$.03 per bag of material pumped. The machine is mounted on a high speed dual axle trailer with brakes and lights.

Standard features include a 2,500 psi hydraulic pressure washer for easy cleaning as well as a 150 gallon water tank with digital water meter.

See the machine at World of Concrete booth N3043. For additional information, call Blastcrete at 800-235-4867 or visit www.blastcrete.com.
