

EASEUS Partition Manager Server Saves Data and Wards off Danger

NEW YORK, N.Y., Jan. 13 (SEND2PRESS NEWSWIRE) – EASEUS Software, the leading provider of innovative, reliable disk management software and solutions, announces the release of their latest server edition of Partition Manager Server which provides reliable system partition resizing and hard disk management.

Partition Manager Server provides users with the necessary tools to resize a system partition, with no data loss, when the system partition is in danger of running out of space. This can often happen when Windows is downloading large updates.

Without data loss, the EASEUS Partition Manager Server can increase the boot partition through re-allocation of neighborhood partitions. It supports Windows Server 2000/2003/2008 (32/64 bit).

In most instances, system partition resizing can be difficult and even dangerous. However, the EASEUS Partition Manager Server is designed to be accurate and safe. It secures data; and resizes and moves system partitions without erasing any data.

In addition, all operations can be previewed on a drag map before applying. The program also features a very intuitive, user-friendly interface which makes the process as easy as 1-2-3.

The EASUS Partition Manager Server works with different file types and can handle 32 hard drives, of each, up to 1.5 TB. And, with new and improved wizards to guide the way, it also performs other hard drive maintenance tasks that include: copying, creating, deleting, formatting, setting active partition, and more.

Space shortage will no longer be a concern. Simply resize the partition without any data loss.

The EASEUS Partition Manager 3.0 Server Edition starts at \$149. Corporate customers may also purchase the solution under an Unlimited Edition; this grants the right to use selected editions of EASEUS Partition Manager on an unlimited number of servers and PCs and is priced at \$399.
