

New, Cost Effective Intranet and Calendaring Solution for Small Business and Project Teams Designed for Users of All Skill Levels

From Individual Users and Up to 100 Person Businesses, an Intuitive, Feature-Rich Intranet Saves Time, Improves Productivity, and Optimizes Collaboration

DETROIT, Mich., Feb. 3 (SEND2PRESS NEWSWIRE) – edge14, LLC (edge14.com), has announced the availability of their easy to use Tofu Intranet and Calendaring web based application. This highly innovative and intuitive software service allows small businesses, project and research teams, and even individuals and families to have the same file and information sharing benefits as large corporations at a fraction of the cost and complexity.

Send2Press® Newswire

While most intranets require a dedicated team of software engineers and company servers to host the internal company website, Tofu's easy to use software is hosted online and supported by an expert staff of engineers that designed the application from the ground up. This level of support, combined with no on-site server or software requirements, allows small business and

individuals to focus their efforts and resources on their tasks while the Tofu team ensures they receive quality and reliable service.

Tofu offers usability enhancements such as double-clicking to edit, dragging-and-dropping items on a page for repositioning, calendar alerts via email or text messaging to your mobile phone, and even a first to market feature called LaterList. LaterList allows users to store web site addresses for later viewing, in an easy to find page that is actively managed by Tofu. With more and more research being done online, the LaterList functions as a great place to store that information.

The price plans are tailored to meet the needs of each target market and maintain cost effectiveness. Some of the most popular plans include the FREE plan for individual users, the \$5/month individual user plan that includes 5 GB of storage, and the small business plan of \$18/month for up to 10 users and 15 GB of storage. The most cost effective plan is the \$84/month business plan for up to 100 users and 50 GB of storage for only 84 cents/user!

Company co-founder Mauricio Gomes says, "The unique aspect of our product is that it allows customers of all technical levels to easily and quickly create, edit, and maintain pages allowing for an increased level of user participation that will truly fulfill the intranet promise of enhanced productivity."

The application offers SSL, the same technology used by banks and online retailers, ensuring all company data and research information is kept confidential as users communicate and interact with the servers. In addition, all plans receive unlimited pages and folders for customer flexibility, page sharing and permissions setting allowing project teams to work closely together and share important information, and all plans provide user status updates making Tofu ideal for virtual teams that rely on remote communications to stay in touch.

About edge14, LLC

The company was co-founded by Mauricio Gomes, a user of similar online services, whom was not satisfied with the service level and prices of existing solutions in the marketplace. Along with his hand picked colleagues, the team spent more than 10 months developing and testing Tofu so it could realize his vision of offering a cost effective solution, filled with easy to use, intuitive features, while providing friendly and responsive customer support on quality issues and feature requests.
