NEW YORK, N.Y., March 31 (SEND2PRESS NEWSWIRE) – As the leading disk management software provider, EASEUS announces its updated version of EASEUS Partition Master 3.5 Server Edition. The updated EASEUS Partition Master 3.5 Server Edition allows users to resize, move, copy, convert, explore, create and delete partitions under Windows Server 2000/2003/2008 and Non-Server 2000/XP/Vista 32 and 64 bit systems. The convert utility allows users to convert the File System from FAT to NTFS for optimizing the performance of computers.

As we know, NTFS is an advanced file system that provides advanced features in performance, security, and reliability – and all these cannot be found in any version of FAT. There is no question that the NTFS File System will be more often used in the future. So people tend to convert a legacy File System from the former FAT to a modern NTFS partition. But in most cases, they have to format the partition. Thus all the data in this partition will get lost,

not to mention the time involved in the process.

However, the good news is that EASEUS Partition Master 3.5 Server Edition can convert the File System from FAT to NTFS without formatting the partition. Data is well protected without any loss during the convert process. Moreover, time is also saved in this way.

Aside from converting File System, EASEUS Partition Master 3.5 Server Edition also allows users to explore a partition before they perform any operations. This is especially useful for resizing partitions by EASEUS Partition Master Bootable CD.
