

QED Connect Announces Lite Version of Award Winning Application

QED offers channel focused product for MSP's, ISP's Telco's

NASHUA, N.H., April 3 (SEND2PRESS NEWSWIRE) – QED Connect, Inc. (OTC: QEDN / QEDN.pk), an innovative software-as-a-service (SaaS) provider for the information security market, today announced the introduction of Omni Lite, a partner focused version of their 2008 award winning SaaS application. In addition to providing SaaS applications, the MSP's, ISP's and Telco's will be able to leverage their own brand to increase sales to their existing subscribers.

Tom Makmann, President of QED explained that each Internet provider has their own corporate identity and theme and managing it across a variety of 3rd-party products can be a concern. The Omni Lite product line has branding support built in which simplifies the time and reduces the complexity of integrating the application into their network.

The SaaS market is expected to grow to more than \$19 billion by 2011 and QED recognizes the importance of the MSP's, ISP's, and Telco's as a key conduit in servicing this marketplace.

Due to the overall business climate that is affecting all companies, QED's sales have been flat for the prior six months. With the introduction of the new Omni Lite the company expects to see significant growth through the balance of 2009. The Omni Lite product will be available in the 2nd quarter.

About QED Connect, Inc.

QED Connect, Inc. is an information security Software-as-a-Service (SaaS) provider that gives organizations visibility, management and control of activity on all their computers, laptops and wireless devices. The company's SaaS, Omni Manager, is an affordable way to monitor and manage how employees are using company computers and the Internet any time, any location; solving problems created by today's "virtual" work environment (branch offices, remote workers, traveling employees). Omni Manager is a web-hosted software application that includes Internet filtering and blocking, antivirus, instant messaging management, asset tracking, application usage monitoring and policy management. ROI is delivered by employee productivity gains, cost savings and improved operational efficiencies.
