QED Addresses Key Market Segment with a SOHO Version of Award Winning Application

MANCHESTER, N.H., April 15 (SEND2PRESS NEWSWIRE) — QED Connect, Inc. (OTC: QEDN), an innovative Software-as-a-Service (SaaS) provider for the information security market, today announced it will expand its channel (reseller) offering by introducing a Small-Office-Home-Office (SOHO) version of the Omni Lite product targeted at the Home Office Market.

Send2Press® Newswire

Industry analysts report that almost 40 percent of PCs purchased worldwide are used in the home serving double duty as a business computer and personal family use. QED's new system facilitates parental supervision of the Internet, paramount for parents of young children, who will be better able to filter and block inappropriate web sites from access by children, set and monitor time spent on computers, and prevent harmful viruses — all in one product designed to operate on up to three separate machines. This new product offering will be available the 3rd quarter of this year at a very affordable user price.

While the Company's sales continue to be adversely affected by the current economic conditions, QED's management believes that with the successful

introduction of its new products and its expanded channel program to now include online sales to retail and home users, the Company is positioned to achieve its revenue projections.

About QED Connect, Inc.

QED Connect, Inc. is an information security Software-as-a-Service (SaaS) provider that gives organizations visibility, management and control of activity on all their computers, laptops and wireless devices. The company's SaaS, Omni Manager, is an affordable way to monitor and manage how employees are using company computers and the Internet any time, any location; solving problems created by today's "virtual" work environment (branch offices, remote workers, traveling employees).

Omni Manager is a web-hosted software application that includes Internet filtering and blocking, antivirus, instant messaging management, asset tracking, application usage monitoring and policy management. ROI is delivered by employee productivity gains, cost savings and improved operational efficiencies.
