

# Syntec Optics Gains ISO 9001:2000 Certification

PAVILION, N.Y., June 23 (SEND2PRESS NEWSWIRE) – Syntec Optics, the largest independent manufacturer of custom polymer optics in North America, has been certified to be in compliance with ISO 9001:2000. The certification audit was conducted by the Bureau Veritas Group. This recognition of Syntec's quality management system reinforces the company's credentials as a high precision manufacturer of injection molded polymer optics and opto-electronic assemblies. Syntec Optics integrates all steps of the process to deliver total solutions that exceed customer expectations.

"We have long pursued continual improvement of our quality management system and wanted to take it to the next level. This certification represents the culmination of continued efforts by every Syntec employee to better our processes to achieve optimal results. This affirms that Syntec values and strives for customer satisfaction and operational excellence," said Lori Steffenilla, VP of Manufacturing Operations.

Syntec plans to leverage this qualification to expand its reach to other markets worldwide that are characterized by cost constraints and tight schedule demands, which require strict process control.

"This ISO accreditation further demonstrates our ability to contribute to the

global polymer optics field. Compliance with internationally recognized standards grants us access to customers who can be assured of the strength and quality of our processes. We look forward to continued market leadership and defining the future of the industry," stated Rick Arndt, Vice President and General Manager.

### **About Syntec Optics**

Syntec Optics has been recognized by Frost and Sullivan as the industry leader in the polymer optics field. Syntec was the recipient of their prestigious North American Polymer Optics Growth Excellence of the Year Award. Syntec's commitments to quality, innovation, and customer satisfaction guarantee superior results that ensure project success. Services are all "in-house" and include design, tooling, manufacturing, integrated assembly services, and full metrology.

With hundreds of completed engagements, customers worldwide can rely on skilled teamwork for high performance, low cost outcomes that push the polymer envelope.
