

3D Industries – Bringing Private Label Production to a New ‘GREEN’ Level

LAKE FOREST, Calif., Feb. 2 (SEND2PRESS NEWSWIRE) – 3D Industries is proud to announce it has new GREEN sourcing, new technologies and services for 2010. At 3D Industries, we are always looking for new ways to bring innovation from our manufacturing network to our client’s markets. 3D is working on advancing technical products that not only meet the demands of new extreme applications, but also improve upon existing designs in **technical apparel** and soft goods.

3D Industries is proud to now offer new GREEN materials to its clients. In today’s age of green friendly, earth conscious consumers, we are now sourcing more innovative, eco-friendly construction materials. Many goods can be manufactured from these materials; everything from technical jackets, requiring heavy duty materials and construction, to lighter fabrics for t-shirts, breathables and swimwear.

“By utilizing new materials like 100% organic cottons, Eco-Lite polymers, recycled plastic fabric blends, soy silks, bamboo fabrics, jute, corn fiber and more, we can offer our clients a more complete resource for cutting edge technologies,” said Corey Herde, 3D Marketing Director.

“Many items can be produced in these materials at relatively the same cost of production, but offer a clean alternative and an advanced selling point. So, we are pretty excited to be offering our customers these new construction methods and the many different advanced fibers being produced by eco friendly resources,” Herde adds.

About 3D Industries:

For over 30 years, 3D Industries has manufactured custom technical clothing, sportswear, and accessories for OEM’s and top aftermarket brands worldwide. Headquartered in Lake Forest, CA, USA, their team of designers, developers and production professionals are experts that understand technical apparel and accessories; from ascetics to the performance logistics for many sports and apparel industries.

3D industries factories are capable of producing a wide range of technical apparel products and sportswear and are compliant to the highest level of quality standards and timeline assurance in the business.
