

Manage Virtual Private Servers with New Web-based Interface

MINNEAPOLIS, Minn., July 15 (SEND2PRESS NEWSWIRE) – Datarealm Internet Services, Inc., an industry leader in Web hosting services, announced this week that it has created an all new line of Xen-based [virtual private servers](#) that can be scaled, over time, to grow with its customers.

No longer is there a need to migrate data between accounts with growth because other, more expensive cloud-hosting services' resources can simply be added to clients' accounts as needed.

A Datarealm VPS is truly a virtual machine – clients have complete root access and may install their own Linux kernel modules to make their VPS specifically tailored to their needs. In case of problems within the VPS, clients are provided console level access so they can log directly into their system.

Datarealm's brand new, Web-based management system allows users to manage and re-image their VPS. If they are experimenting and make a mistake, they can simply click the "reimage" button and they are given a brand new system. Or, if they want to try a different operating system, they can select it from the drop-down menu before choosing the "reimage" option.

"We've been using cloud-type hosting technologies such as load balanced server farms for our shared Web hosting environment for more than a decade," says Andrew Auderieth, President, Datarealm. "However, the power to scale and manage these new Xen VPS servers is just unbelievable when compared to older, Web-hosting technologies."

In a nutshell, [VPS hosting](#) features include: choice of 32 or 64 bit Linux OS, load your own kernel modules, automatically reimage your VPS, dedicated IP address, console access, and guaranteed RAM with Xen technology. Datarealm's services include: [shared Web hosting](#); [dedicated servers](#); and VPS.

Users can do anything on a Xen VPS that they would on a stand-alone dedicated server.

Additionally, Datarealm Internet Services has made [VPS hosting](#) affordable. Packages start at \$4.95 per month.

About Datarealm Internet Services, Inc.:

Founded in 1995, Datarealm Internet Services was one of the first Web hosting companies in the world. Datarealm has maintained its position as an industry leader by staying on the forefront of Web-hosting technologies and offering unparalleled customer support.
