

Server Cloning Software Helps Transfer and Protect Data on Windows Server 2000/2003/2008

NEW YORK CITY, N.Y., Feb. 15 (SEND2PRESS NEWSWIRE) – EASEUS Todo Backup, the award-winning and cost-effective server backup and disaster recovery solution for the Windows environment, now features [hard disk/partition clone](#) capability to simplify the process of upgrading hard disks or transferring files to the new hard drive disk on Windows Server 2000/2003/2008 and Windows 2000/XP/Vista/7.

EASEUS Todo Backup Server has enhanced feature for Windows server cloning, which helps people clone the whole server including operating system, applications and data to easily upgrade hard disk/system or transfer files to a new hard drive disk.

This Windows server clone software can clone any hard drive with a FAT, NTFS, Linux Ext2 and Ext3 file system. It lets you copy a single partition or the whole hard disk on Windows server; that is, you can clone any hard drive to any other hard drive or clone the disk with different interface, like from SATA to SCSI. You can also resize the hard disk or partition during cloning for a better disk management profile.

If you plan to copy the operating system to dissimilar hardware, the feature of [Universal Restore](#) will help a lot.

For those who manage multiple servers or workstations, this Windows server cloning software is highly recommended: it will reduce the work traditionally required for disk upgrading and save a lot of time to deploy a new hard disk on Windows servers.

A most sincerely grateful PC user of this cloning software acclaimed: “I cannot tell you how many PC/server systems I have had to replace over the last ten years because I could not find software to do what yours did tonight on a Win XP Pro (machine) in less than 30 minutes. I downloaded the program to clone a 250GB SATA 7200 RPM Western Digital... This software you have created is elegant beyond words.”

Pricing & Availability:

EASEUS Todo Backup Home free for home users is available at:
