

EASEUS Universal Restore Helps Restore/Transfer System to a Different Hardware Configuration

NEW YORK CITY, N.Y., Feb. 22 (SEND2PRESS NEWSWIRE) – EASEUS Todo Backup, the award-winning and cost-effective backup and disaster recovery solution for the Windows-based environment, comes with the new advanced feature **Universal Restore** to quickly restore a Windows operating system to different hardware platforms and provide a complete system recovery without reinstallation.

The feature of Universal Restore added to EASEUS Todo Backup is a fully integrated module that is designed to restore the image from the system originally backed up to a hardware platform with a dissimilar processor, different motherboard or a different mass storage device, as well as ensure the server or workstation can boot its operating system normally after a restoration/deployment.

Providing highly flexible disaster restore and system migration, the Universal Restore feature is applicable for:

- Instant recovery from a failed hardware after disaster strikes and cannot find an exact match for the original system specifications;
- Upgrade or move system to new different hardware;
- Time-saving operating system deployment with complete hardware independence.

With Universal Restore, complete system recovery can be simply achieved from an image, with no time-consuming reinstallation of the operating system, applications & settings and data, while ensuring business continuity.

Easy to use and works well as its users have said, EASEUS Todo Backup is well compatible with Windows 2000/XP/Vista/7 and server 2000/2003/2008 and supports both FAT and NTFS file systems. You can get the peace of mind that you can restore your backups to a new server or workstation, significantly saving a lot of time to recover from a catastrophic hardware failure.

What's more, EASEUS Todo Backup brings many other advanced features like **schedule backup**, incremental backup, system snapshot, event-based backup, email notification, etc., to simplify the work of backup and fully protect the servers and workstations.
