

# Alpha and Omega Gene Therapy Eye Cream's Scientific Blend Removes Years of Damage

PHILADELPHIA, Pa., Dec. 18, 2013 (SEND2PRESS NEWSWIRE) – E'Shee Clinical Esthetic announced the launch of a new eye cream product that is designed to target wrinkles, sagging skin, dark circles and puffiness. But, unlike other eye creams, this Alpha and Omega gene therapy eye cream is a scientifically-advanced blend of innovative ingredients.

"Supremely-advanced restoration and care for the eyes and lips is what this product delivers," Nataly Giter, founder, E'shee Clinical Esthetic, says.

E'shee's eye cream has a light creamy texture and includes ingredients such as patented aFGF (acidic fibroblast growth factor), far-infrared powder and Botox-like peptides. It's designed for the most delicate facial skin and works to remove years and years of skin damage and negligence.

aFGF is a bioengineered growth factor identical to the natural growth factor found in the human body and can provide fast, skin-repairing effects while dramatically speeding up the skin-renewal process. And, far infrared powder, produced from natural elements, can absorb outside heat energy and then release it. It recharges aging or dying cells which may explain why a far infrared ray with this healing wavelength is called "life light."

In addition to the usual benefits of fine line disappearance, deep wrinkle reduction and firmer and healthier skin, gene therapy eye cream users will also realize better texture; rebuild extra cellular matrix and restore its function; and reduce puffiness through improved blood circulation and toxin removal.

Alpha and Omega gene therapy cream also works to reduce redness caused by rosacea; helps to repair broken capillaries; and can help to heal scar tissue resulting from burns or acne.

"Stronger and improved skin is typically seen within 28 days," Giter says.

E'Shee Clinical Esthetic recommends this gene therapy eye cream for all skin types and ages. It's a non-greasy and fast-absorbing formula that does not clog pores.

## **About E'shee Clinical Esthetic:**

E'shee was launched in 2009 by Nataly Giter, a hands-on skin care professional with more than 20 years of experience. Through research and practical experience, she learned about the most effective ingredients for advanced skin care and became associated with Dr. Chiu, a professor from Ohio University and the first global pioneer to clone the human FGF-1 gene.

Together, with their combined connections to industry professionals, they used FGF-1 to create an extraordinary anti-aging product line, using 99 percent pure FGF-1 peptide – the best quality available outside of the human body.
