

# Brilliant SSD Migration and Disk Clone Solution Provided by EaseUS Todo Backup

NEW YORK, N.Y., Sept. 25, 2013 (SEND2PRESS NEWSWIRE) – EaseUS Todo Backup, developed by the world leading backup and security software company EaseUS, is the most reliable data backup and recovery software with significant cost and time savings. It includes all backup functions, especially disk/partition clone which can help users:

- \* Upgrade the older smaller hard disk to a newer larger SSD without reinstalling the operating system and applications.
- \* Transfer all data from one disk to another.
- \* Ensure data security by making a copy of damaged hard disk via sector level and recovering lost data from the copied disk.
- \* Clone hard disk without interrupting your business work, especially minimize server downtime when transferring Server from one hard disk to another bigger hard disk.

“EaseUS Todo Backup Free. This is the program we’ll be using to migrate your installation. It’s easy to use, free, and it can clone partitions from a big drive to a smaller drive, which is crucial for this process (since your SSD is probably smaller than your current hard drive),” said Whitson Gordon from Lifehacker.

“For those who want to clone their drive directly, there are several tools available. While many find it worthwhile to pay for the convenience and ease of use offered by a for-purchase program, there are a few popular free alternatives that may do the job just as well, such as [EaseUS Todo Backup Free](#),” said Brian Westover from PCMag.

As an advanced and reliable data backup and system disaster recovery software for both home and business, it also offers powerful features:

- \* Schedule backup, incremental backup, differential backup.
- \* System backup, network backup, disk/partition backup.
- \* SQL/Exchange Server database backup and recovery.
- \* Recover to dissimilar hardware for easy system migration.
- \* Tape, NAS, dynamic and GPT backup.
- \* Built-in bootable disk for disaster recovery.
- \* System backup/restore and deployment via PXE.
