

Capital Industries Shares Tips to Know When to Repair Industrial Concrete Flooring

MATTITUCK, N.Y., Jan. 31, 2019 (SEND2PRESS NEWSWIRE) – Capital Industries, Inc. shares tips for industrial, commercial businesses to know when to repair concrete flooring. Concrete floors and related structures are the basic elements of any building, which is why they need to be checked regularly and properly maintained. The absence of preventive maintenance can lead to expensive repairs, accidents and even lawsuits.

Send2Press® Newswire

For over 30 years, Capital Industries has provided professional maintenance personnel and resourceful homeowners with the products they need to maintain and [repair concrete floors](#).

Recognizing Damaged Concrete

Damage to concrete can result from the weather or from regular wear and tear. It can also result from the foundation settling, heavy equipment, and regular traffic from forklifts or other vehicles. Additionally, concrete used in commercial or industrial areas can suffer from the effects of heavy or

vibrating machinery.

Such conditions can cause a deterioration in the surface of the concrete and floor joints. Since concrete is porous, water can penetrate the surface, leading to corrosion or spalling in the material itself and possibly to the development of rust in the underlying reinforcement bars.

Surface cracks can eventually create a hazard to machinery or to the workers themselves. Furthermore, concrete deficiencies can cause damage beyond cracks in the flooring, perhaps even compromising the foundation of the entire structure.

These are some obvious indications of deficient concrete:

- Surface damage
- Visible cracking, chipping or corrosion
- Floors or walls that appear uneven
- Jammed doors or windows

Finding Solutions to Concrete Damage

It is of vital importance that damaged concrete is repaired as soon as possible. Fortunately, epoxy and other concrete repair products on the market can be used to repair cracks and other deficiencies. [Floor coatings](#) are also available to create concrete surfaces that are shiny or not slippery.

Proactive strategies can be used to prevent commercial concrete corrosion. The products available from Capital Industries can be used to repair commercial concrete areas, driveways, patios, ceilings, walls, coolers and freezers.
