

Cliff Co adds Lansing Hollow Spindle Lathe Expanding Its Specialty Services

GLENDALE, Ariz., April 17, 2018 (SEND2PRESS NEWSWIRE) – The Lansing is a machine with specialized abilities usually utilized by large oil companies, says Cliff Co, LLC. The big dual chucks and large diameter hollow spindle tailor it for holding and repairing otherwise daunting diameters of pipe and shafting. Lathes of these capacities have earned a reputation and sub category known as “Oil Country” lathes.

Send2Press® Newswire

As the name implies this is also where one most likely would have to seek out a source to provide repairs to large diameter parts, (which generally) are married with longer lengths. Requiring a company to ship their part out and languish its return at premium cost.

Cliff Co has enjoyed sustained growth in their hydraulic service department. The Lansing was a decision to expand that growth; while positioning themselves to extend services to Arizona municipalities such as Waste Management, CAP, SRP, as well as mining entities.

About Cliff Co:

Cliff Co is a unique blend of heavy equipment, diesel, hydraulic service and

repair. The former is also combined with machining, fabrication, specialty welding, prototyping and parts replication capabilities. The diversity of capability, service and staff offer greater Phoenix and the entire valley a one stop solution opportunity.
