# DataNumen DWG Recovery 2.1: Repair Maximum AutoCAD Data with Ease

NEW YORK and HONG KONG, Feb. 3, 2021 (SEND2PRESS NEWSWIRE) — DataNumen company, the developer and vendor of pro-level recovery solutions, announces the release of DataNumen DWG Recovery 2.1. This program performs quick repair of inaccessible AutoCAD drawing files with the highest average recovery rate confirmed by comparative tests. The new features of version 2.1 include automatic upgrades to the latest version and auto-check for product updates.

Send2Press® Newswire

AutoCAD is a widely used program for computer-aided design and drafting. It is an essential tool for engineers, architects, interior designers, real estate developers, and other professionals all over the world. Unfortunately, the drawing files (DWG) created in AutoCAD may get damaged or corrupt due to a variety of reasons: power failures, hardware problems, virus attacks, or OS errors can make them inaccessible. To avoid the loss of important blueprints and considerable monetary damage, it is recommended to get an effective DWG recovery solution in advance — for example, DataNumen DWG Recovery, which already helps over 10 million users worldwide.

DataNumen DWG Recovery is based on the company's proprietary technology: the

program scans damaged DWG files byte by byte, making it possible to restore as much AutoCAD data as possible. During comparative tests, DataNumen DWG Recovery demonstrated the best average recovery rate of 81.1% and the average recovery time of about 3.5 minutes. It is worth noting that the built-in RECOVERALL command of AutoCAD managed to restore only 7.2% of DWG data.

Apart from the high recovery rate, DataNumen DWG Recovery is remarkable for its intuitive interface and straightforward recovery procedure. The user only needs to select the DWG file that needs to be repaired, chooses the output format, and clicks the "Start Recovery" button. The percentage of completion can be viewed on the progress bar, and once the recovery is successfully finished, the user gets a pop-up message. Under the Batch Recovery tab, it is also possible to repair multiple DWG files in one go.

The new features of DataNumen DWG Recovery 2.1 include automatic upgrades to the latest version and auto-check for new updates. It is advisable to regularly install new updates because the DataNumen team is constantly working on the program to improve its performance.
