

DataNumen Exchange Recovery Is Now Available in Multiple Languages

NEW YORK and HONG KONG, March 3, 2021 (SEND2PRESS NEWSWIRE) – DataNumen, a software company specializing in pro-level data recovery solutions, has released the new version of its OST repair tool. DataNumen Exchange Recovery 8.5 retrieves data from inaccessible offline storage tables, preventing the loss of important data from Outlook 365, Exchange, IMAP, or Outlook.com. The new version is localized into 9 languages: Spanish, French, German, Italian, Portuguese, Russian, Japanese, Korean, and Simplified Chinese.

Send2Press® Newswire

MS Outlook is a globally popular email client and personal information manager with over 400 million users. It stores user data in offline storage tables (OST) for the following types of accounts: IMAP, Outlook 365, Outlook.com, and Exchange accounts. OST files allow the user to access previously downloaded emails, calendar entries, and other data without an Internet connection.

However, sometimes the contents of an offline storage table become inaccessible – for example, if the file is damaged or orphaned (which means that the account linked to this OST file is no more available). In some

cases, it can entail grave problems and material losses, especially if the file contains important business data. Currently, MS Outlook does not offer any remedies for such a situation, therefore it is recommended to install an external OST repair tool – for example, DataNumen Exchange Recovery.

This program can fix any errors caused by inaccessible OST files. If an offline storage table is damaged, DataNumen Exchange Recovery retrieves its contents and generates a new OST file to replace it. In case of an orphaned file, the program converts it to a PST table, which can be easily accessed by Outlook. DataNumen Exchange Recovery can also restore permanently deleted emails or other objects in the user's Exchange mailbox.

DataNumen Exchange Recovery is based on advanced technologies, which allow to analyze OST files byte by byte and retrieve as much data as possible. According to [comparative tests](#), this solution demonstrates the highest average recovery rate in the market: 96.8% against 51.9% of the nearest competitor. That is why DataNumen Exchange Recovery, along with other DataNumen products, is used by Microsoft, Oracle, Intel, and other large corporations.
