

Dermatology Laser Center and Spa Certified as Tatt2Away Clinic Center

SAN MARCOS, Texas, Sept. 6, 2016 (SEND2PRESS NEWSWIRE) – Dr. Ana Rodriguez, at Dermatology Laser Center & Spa, has developed a distinctive philosophy for offering exceptional dermatological care, fusing aesthetics and medicine. That's exactly why Tatt2Away (tatt2away.com), from Rejuvatek Medical, was the perfect choice for offering effective, natural tattoo removal.

Send2Press® Newswire

Tatt2Away is a revolutionary non-laser tattoo removal treatment that actually does what it says – removes ALL tattoo ink, regardless of color, from the skin without the discomfort, cost, and risk associated with other methods.

Unlike laser, which actually breaks up tattoo pigment that is then absorbed by the body, Tatt2Away® utilized TERPSOL®, a solution naturally occurring in carbohydrates, which binds and breaks down the ink pigments bringing them up and out of the body.

“We already had a laser that removes tattoos, but it takes multiple treatments, and there’s no way of guaranteeing how many may be required. There are specific colors that the lasers do not completely remove, so there’s usually some residual left in the skin. Particularly, blues, oranges, and greens are the most resistant colors,” Dr. Rodriguez says. “The Tatt2Away system completely disregards the color and completely pulls out the pigment.”

Whether a person's goal is to completely delete their unwanted tattoo or simply to remove specific portions to better accommodate a cover-up, Tatt2Away offers an effective treatment option.

As a Tatt2Away Clinic Center, the technicians at Dermatology Laser Center & Spa are specially trained in this revolutionary tattoo removal technique.

"What has impressed me the most," comments Cosmetic Technician Amanda Garcia, "is to know that Tatt2Away takes fewer treatments with minimal discomfort. The aftercare that's involved is very simple, and it heals very nicely.

"It's the newest innovation for Tattoo removal."

ABOUT REJUVATEK MEDICAL / TATT2AWAY:

Rejuvatek Medical, manufacturer of the Tatt2Away® Tattoo Removal System, specializes in the development of natural and effective tattoo removal options for the tattoo removal industry. Tatt2Away® utilizes a proprietary "Trans-Epidermal Pigment Release®" (TEPR®) system, which extracts ink out of the body, thus avoiding potential health risks associated with laser removal.
