

EaseUS Software Releases Brand New Todo Backup 8.5 Edition

NEW YORK, N.Y., July 8, 2015 (SEND2PRESS NEWSWIRE) – Recently EaseUS Software has given a fresh start to data backup software – the new release of Todo Backup 8.5 version. With intensified features and functions such as creating 64-bit WinPE bootable disk fast, working efficiently with Central Management Console and supporting GPT drive well, the Windows 10-ready new backup software performs tasks of data security and integrity in a groundbreaking way.

By making great efforts on research and development, EaseUS Software (www.easeus.com) has established a leading position in data recovery and backup utility fields. Based on the previous 8.3 edition, **EaseUS Todo Backup 8.5** absorbs all merits and are fortified by robust new features for users including service providers to guard against any risk of data loss. It's well-known that EaseUS backup software is a complete solution to backup and recover all files, document, system, disk or partition and Outlook emails from laptops, PCs, workstations and servers in a safe way.

“EaseUS Software is always keeping every detail in mind to make sure that Todo Backup 8.5 version can accurately carry out all backup policies. Potent support of 64-bit Windows system is to fast create a bootable disk which will effectively launch system under the UEFI circumstance,” explained Wan Jianhua, General Manager of EaseUS Software.

This advanced backup and recovery software fulfills the whole procedure by full, incremental, differential and schedule backup. Full backup contains all data in any storage place. Incremental and differential ways only backup the changes after the previous backup to save time and storage space. Disk replacement or upgrade can be accomplished by migrating system to a SSD or a bigger HDD. Flexible disk restoration and management has effects on regular backup progress.

The newly released 8.5 edition comes with overall improvement in 64 bit WinPE bootable disk, GPT drive compatibility and smart backup. Highly efficient 64 bit WinPE bootable disk keeps data safe in any case. It's quite fleeting to create a WinPE-based bootable media for 64-bit Windows system residing on GPT drive to start up computer recovery from it. Meanwhile, it makes success in system recovery, universal backup and system clone on GPT drive.

Except that, compatible with Windows 10, EaseUS Todo Backup 8.5 works seamlessly with Central Management Console which remotely deploys backup plans to all clients in a LAN and centrally administrates entire backup procedure to enhance business efficiency. The customized scheduling backup occurs without user name and password. Mobile devices connected to laptops, PCs or workstation can trigger backup plans immediately. Files can be automatically and smartly backed up.

This comprehensive backup software makes much progress in rapidity and data safety for home office and business. Email notification, reports and event logs enable users to keep informed of frequent backup results. In general, EaseUS Todo Backup 8.5 edition lifts data security and integrity to a higher level.
