

ESI Releases an Updated Version of the PVC Edgebanding Pattern Search System for 2012 on the ESI Web Site

SAN DIMAS, Calif., June 6, 2012 (SEND2PRESS NEWSWIRE) – ESI Edgebanding Services Inc. has announced the full update of their PVC edgebanding to matching high pressure laminate patterns database.

The ESI PVC pattern database is fully searchable by laminate brand, laminate pattern number or laminate pattern name. This convenient and easy to use online search system provides a PVC edgebanding match to virtually all known brands of surface laminate available on the market today. The search system also allows for specific laminate pattern search by type for Solid Colors, Woodgrains and Designer Patterns.

Headquartered in Southern California, ESI operates nine sales, warehouse and operations centers in eight states. Strategically located throughout the U.S., each center maintains a full inventory of products specially suited for both national and regional requirements. The operation of a slitter at each center provides for the quick conversion of edgebanding to special custom widths.

“ESI serves its customers by manufacturing, distributing and importing a wide range of PVC edgebanding products. It’s from this hybrid system of sourcing that ESI has led the industry with a high level of service and range of options while consistently offering the industry’s lowest minimum quantity and shortest lead-time for custom production,” says Dave Jones, Marketing Director of ESI.

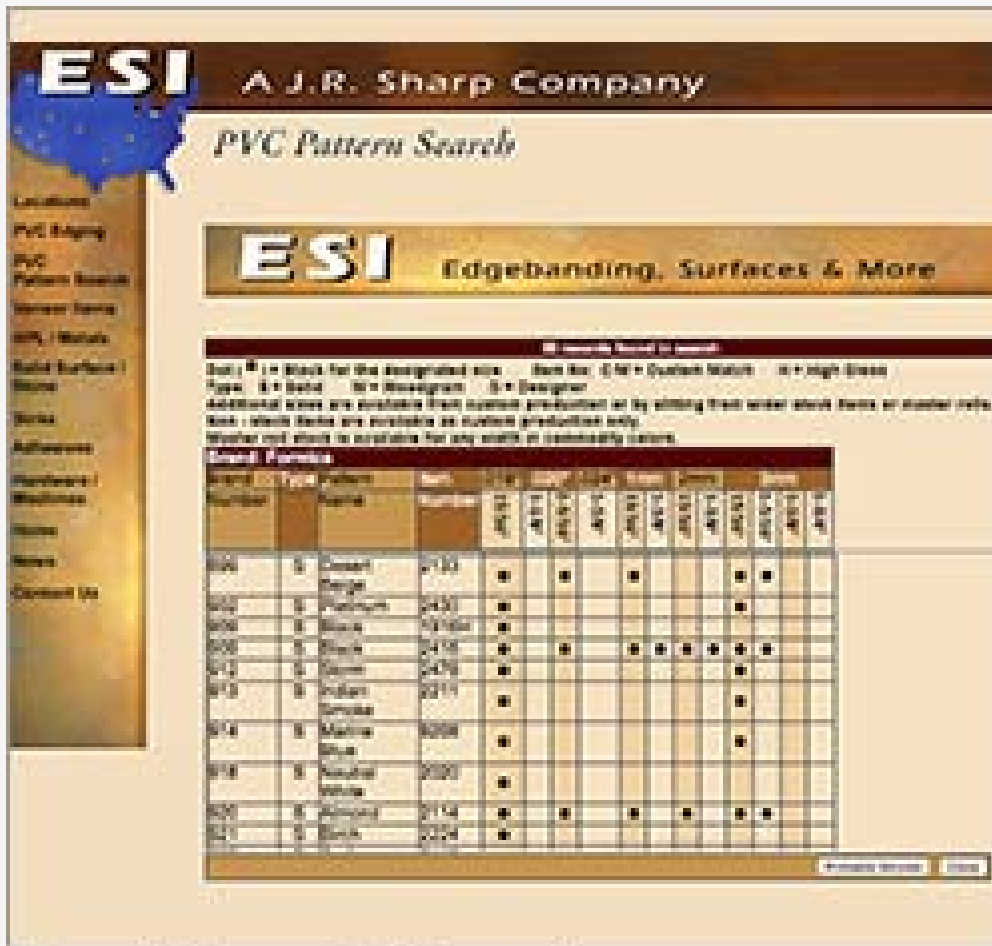

In addition to the latest up-to-date PVC to laminate matching offered on ESI’s web site, visitors will also find a helpful guide to product specifiers as well as reliable technical material specifications making the application selection of all edgebanding products easy and straight forward.
