

Face of Jules in Los Angeles Provides Revolutionary New Ionix Light Facial Treatment

LOS ANGELES, Calif., March 17, 2022 (SEND2PRESS NEWSWIRE) – Los Angeles-based Skin Care Clinic, Face of Jules, introduces the new Ionix Light Facial Treatment! This revolutionary new system incorporates five treatment modalities in one device, providing a total facial rejuvenation experience. The applications include diamond abrasion, oxygen therapy, ultrasound, microcurrent stimulation and light/oxygen therapy. This powerful combination of treatments works to improve skin tone and texture, reduce wrinkles and lines, and give people a youthful, radiant complexion. Contact us today to schedule your Ionix Light Facial Treatment!

FACE OF JULES IONIX LIGHT FACIAL TREATMENT

Send2Press® Newswire

What is the Ionix Facial?

This advanced facial is all about glow, lift, and relaxation. It rebuilds skin by incorporating multiple non-invasive skin care innovations. It's an upgraded version of the well-known OxyLight Facial loved by celebrities. It utilizes full spectrum LED Light with Negative Ion Therapy, Oxygen Therapy,

Microdermabrasion, Microcurrent, Radio Frequency, and Ultrasound for immediate and cumulative results. Targets all the signs of aging without discomfort or recovery time. It improves muscle tone, reduces puffiness, increases cellular activity, and stimulates one's own collagen production. It's great for general radiance and for everyone experiencing loss of firmness and dullness in the skin.

The overall result is healthier, firmer and younger looking skin. Brighter, smoother skin is obvious from the very first treatment but the results are progressive. Clients will notice more corrections with each treatment. Depending on the desired results we recommend a series of 6 to 8 consecutive treatments two weeks apart. This facial does not include extractions.

Diamond Abrasion

The diamond abrasion application uses a small, hand-held device to gently sand the top layer of skin cells away. This exfoliation process removes dead skin cells and reveals the healthy, youthful skin beneath.

Oxygen Therapy

Oxygen therapy is a treatment that delivers oxygen and nutrients to the skin cells, promoting cell turnover and collagen production. This treatment helps to improve skin tone and texture, reduce wrinkles and lines, and give clients a youthful, radiant complexion.

Ultrasound

The ultrasound application uses sound waves to penetrate the skin and promote collagen production.

Microcurrent Stimulation

The microcurrent stimulation application uses a low-level current to stimulate the muscles and improve skin tone and texture.

Light/Oxygen Therapy

The light/oxygen therapy application uses light energy and oxygen to penetrate the skin and promote collagen production.
