

Kiosk Industry Association (KMA) Announces New ADA Accessibility and EMV Initiatives

DENVER, Colo., Feb 15, 2021 (SEND2PRESS NEWSWIRE) – The Kiosk Association announces initiatives for Kiosk EMV and Kiosk ADA.

Send2Press® Newswire

EMV Initiative – As a Participating Organization with the PCI SSC, KMA encourages deployment of EMV devices (PCI certified) for CATs (Cardholder Activated Terminals). The problem has been companies attempting to try and reposition web non-EMV shopping carts into a self-order terminal using just a standard magstripe reader.

On ADA Accessibility – to kick off the new initiative the Kiosk Association has released a free 14 Point Kiosk ADA Checklist. This is a distillation of the Kiosk ADA Framework (Mandatory + Code of Practice) released to U.S. Access Board in 2019.

The initiative follows U.S. Access Board conference call in January introducing new Executive Director. A follow-up call in March is set. The

intent of our initiative is to properly align the initial design process so that by default accessibility is accommodated, and not reduced to potential options dismissed or not explored. Like EMV, this also is impacted by casual relocation of web ordering which has not been optimized for accessibility onto self-service terminals.
