

KiwiGeeker introduces MobiSecret to Face Fidelity Concerns in Committed Relationships and Marriages

HONG KONG and NEW YORK, N.Y., April 24, 2014 (SEND2PRESS NEWSWIRE) – MobiSecret (<http://www.mobisecret.com/>), released to the market April 15 this year by KiwiGeeker, is an intelligent data analysis application that scans, recovers, analyzes and exports communication data stored in any iPhone. The software is designed to identify potential threats to a committed relationship or family including affairs, drug abuse, criminal activity, etc., through its smart contact history analysis function.

Whether the data is intact or has already been deleted, suspicious information with contact details are detected by MobiSecret, and become available for assessment and extraction. KiwiGeeker, the pioneer data management solution provider, developed the tool aiming to empower users to mitigate risks and threats to their relationships and themselves.

Infidelity and other seedy activities hidden from partners in any kind of committed relationship is a harsh reality that most people can understand, if not from personal experience than from second-hand stories and the media.

According to a survey by the Journal of Marital and Family Therapy published in January 2014, one or both spouses admit to infidelity (either physical or emotional) in 41 percent of marriages, and only 31 percent of marriages last after an affair has been admitted or discovered.

Being left in the dark by a loved one, and later facing the consequences of that lack of knowledge, can be traumatic and cause rippling effects in all areas of a person's life. MobiSecret allows people in committed relationships the opportunity to discover a partner's secretive activities before it's too late.

"Straying by one or more partners in a relationship, whether it be to another lover or to some kind of illegal or harmful activity, is an age-old part of the human condition. It happens. But these days, most of the clues are available right on a person's cell phone," says Mr. Beank, the managing director of MobiSecret.

"We want to empower people, and we do that in two ways. First, MobiSecret enables you to see the clues, face the issue head-on, and take matters into your own hands. From the analysis, you can take action before you're dragged down into a really harmful situation. Second, and equally as important, this tool can encourage partners to be more open about their communication, and ultimately address the trust (or lack of trust) between two people or family members."

He added, "It's not just about finding out what's really going on behind-the-

scenes; it's about re-establishing healthy patterns in vulnerable partnerships. The truth can hurt, but the truth can also heal.”

MobiSecret enables users to access and view objective threat analysis of call and message communication patterns (also recovering and assessing deleted data) on any iPhone, even through iTunes backup if the physical device isn't on hand. Know if your loved one is risking themselves or the family before it's too late to turn the tides with this pioneer software, now available for Microsoft Windows.
