

Miami Mold Specialists Upgrades Attic and Crawlspace Mold Removal Technologies

MIAMI, Fla., April 3, 2018 (SEND2PRESS NEWSWIRE) – Prestigious South Florida mold removal co., Miami Mold Specialists, acquires state-of-the-art fogger tech. Specifically designed for attic, crawlspace, and maritime mold remediation and disinfecting.

Send2Press® Newswire

Toxic mold in attics and crawlspaces is a major problem throughout the state of Florida. Taking into account the past hurricane season, crawlspaces among many other areas exposed to flooding would all be perfect places for mold to thrive. Attics are another prime area for mold to grow as these areas are constantly under extreme temperatures and consistent high levels of excess moisture and humidity as South Florida is in fact, classified as a tropical climate.

Miami Mold Specialists new state of the art vector foggers are specifically designed for getting in those hard to reach areas, such as in attics and crawlspaces. The innovative South Florida mold removal company also utilizes Airbiotics, an all-natural, all purpose, VOC free, biodegradable cleaner that

utilizes natural probiotics to clean and disinfect areas on a microscopic level.

For more information about Miami Mold Specialists new mold removal technology, visit <https://www.miamimoldspecialists.com/exclusive->.

According to the Miami Mold Specialists website, “By utilizing cold fusion and AirBiotics cleaning solutions, your attic’s air quality will be restored and the temperature will decrease significantly. The fogger uses ULC (ultra-low volume) technology which produces a powerful 8-16 GPH flow rate and it can easily cover an area of 328 square feet in less than 1 minute; this makes it one of the most durable and powerful ULV fogger on the market.”
