

New Fresno Pedestrian Injury Study Maps Most Fatal Roads

VISALIA, Calif., Feb. 12, 2020 (SEND2PRESS NEWSWIRE) – According to a 2018 police report, a staggering 64 percent of fatal crashes in Fresno involved a vehicle and a pedestrian. In an effort to raise awareness and reduce pedestrian fatalities, Maison Law of Visalia, California conducted a study of Fresno's most dangerous roads and intersections for pedestrians.

Send2Press® Newswire

The study shows users, at-a-glance, which roads, intersections, and railway crossings are the deadliest for pedestrians and the number of fatalities that occurred at each.

The study reveals that the deadliest roads for pedestrians include:

- RT 99
- Blackstone Ave.
- Shaw Ave.
- Cedar Ave.
- Clinton Ave.

- Fresno Street
- Herndon Ave.
- Blackstone Ave.
- 1st Street
- Gettysburg Ave.

In addition to spotlighting this important problem, Maison Law also provides practical strategies for improving pedestrian safety in Fresno and around the U.S.

Maison Law worked with OptimizeMyFirm (<https://www.optimizemyfirm.com/>) to aggregate data on pedestrian fatalities and to produce several graphics including an interactive map to chart and study where each pedestrian-involved accident occurred from 2008-2018.

The complete study details and interactive map are available at: <https://maisonlaw.com/2020/02/fresno-pedestrian-study>.
