

# Time-Sensitive Treatments for Spotted Lanternfly Need to Be Scheduled Now in Early Fall

HUNTINGDON VALLEY, Pa., Sept. 21, 2020 (SEND2PRESS NEWSWIRE) – Adult Spotted Lanternfly are swarming area trees in a record-breaking year for the invasive insect. Not only do Spotted Lanternfly pose a risk to the health of trees and plants, they also cause some really gross problems for homeowners.

As the bugs feed on trees, they drip sour-smelling, sticky excrement called “honeydew.” It coats everything underneath where the insects are feeding. The tacky honeydew is difficult to remove from hardscapes, decks, cars, and other valuable objects on the property.

What’s even worse is that the tantalizing honeydew, along with the black, sooty mold that grows from it, attracts stinging wasps. Wasps will swarm a property, and that’s especially a problem if there are children playing in the yard.

## **Treatments Need to be Carefully Timed**

Spotted Lanternfly has only been in the US since 2014, but the insect has multiplied rapidly. To determine the best way to control this new invasive pest, researchers at Penn State and the PA Department of Agriculture recommend a control program that targets the pest during the Adult stage. This stage occurs between July and November.

The Adult stage is when Spotted Lanternfly is most vulnerable to treatment. By September through November, the Adults can be found everywhere on the host trees. 1-2 sprays are needed on the trunk, limbs and foliage. This spray kills the insect on contact and the residual kills any Spotted Lanternfly that walk over or feed on the tree for up to 30 days.

Like many Tree companies battling Spotted Lanternfly, Giroud Tree and Lawn is seeing a very high interest in the control program this year.

“We’re confident that these treatments will do the job,” says Rodney Stahl, Jr, Giroud’s Plant Healthcare Manager. “The problem is that our schedule is filling up. Homeowners, who want to have their trees treated, need to get on a program now before it’s too late.”

Call an ISA Certified Arborist to evaluate the property for treating valuable trees and plants when the Spotted Lanternfly Adults emerge.
