

TSI's Phantom XL3 Lateral Access System Redefines the Standard of Care in Spine Surgery

SUGAR LAND, Texas, Oct. 23, 2017 (SEND2PRESS NEWSWIRE) – TeDan Surgical Innovations (TSI) today announced the launch of the Phantom XL3™ Lateral Access System for lumbar spine surgical retraction. A full product release will be held later this month at the North American Spine Society Meeting (NASS) in Orlando from October 25 to 27.

Send2Press® Newswire

Unencumbered access to the anatomy while maintaining a small surgical incision remains a clinical challenge for the minimally invasive surgeon. The all-new Phantom XL3 transforms the approach by eliminating instrumentation fiddle factor through the integration of unparalleled surgical access design elements – all with the focus of elevating the surgeon's experience.

"There are a variety of lateral lumbar retractors available today, but finding the system that meets all of your needs as a surgeon can be difficult. The intuitive design of the Phantom XL3 provides reliable retraction with a sweeping blade motion unlike any retractor on the market," said James J. Lynch, MD, FAANS, CEO Spine Nevada.

As a full solution to lateral lumbar access, the Phantom XL3 comes equipped with an integrated 360-degree directional EMG neuromonitoring dilator kit as well as lighting and shim components to provide additional stability and visualization.

“With a rise in minimally invasive approaches (MIS) for spinal fusions, we believe that the versatility and ease of use offered with our Phantom XL3 Lateral Access System will redefine the standard of care for MIS approaches,” said Terry Johnston, VP of Sales and Marketing of TSI.

For a full product showcase, visit the TSI booth #1723 and attend the NASS Simulation Lab. To learn more about TSI’s Phantom XL3 Lateral Access System or to register for the lab, visit <http://www.tedansurgical.com/> or call 877-726-0886.

About TeDan Surgical Innovations:

TeDan Surgical Innovations was founded in 2006 with the goal to innovate and address evolving techniques in surgical access. The company has developed a wide variety of retractors and disc prep instruments for posterior, lateral and anterior spine, as well as cardiothoracic, neurological and orthopedic procedures. TeDan Surgical Innovations is committed to providing high-quality, state-of-the-art medical devices that address customer and market needs.
