

Venice Air Conditioning Company Mahle Cool Air and Heating Offers A New Environmentally Safe Duct Cleaning Service

VENICE, Fla., May 3, 2016 (SEND2PRESS NEWSWIRE) – HVAC company Mahle Cool Air and Heating introduces a new and innovative duct cleaning service that removes mold, reduces bacteria, and eliminates odors. Mahle Cool Air and Heating is now offering a fogging service for its customers and residents of Sarasota and Charlotte Counties. The innovative fogging process cleans the ducts of your HVAC systems to eliminate odors without the use of masking perfumes.

Mahle Cool Air uses Fresh Duct Odor Eliminator that infiltrates and neutralizes odors at the source, not just covering them up, leaving behind a fresh scent. The fogging product is a bacteriostat, fungistat, mildewstat and a deodorizer for residential and commercial use.

Fogging is an environmentally safe duct cleaning solution that kills germs in your air conditioning duct while keeping your indoor air quality is at optimal levels. Dirt, dust mold, pollen and animal dander are recirculated through our air ducts every time we turn on our heat or air conditioner. Combine this with moisture and you have the ideal breeding ground for fungi, germs and household mold. Fogging eliminates odors associated with bacteria, mold, animals, mildew, smoke, musty and other odor causing organisms when used as part of such a comprehensive preventive maintenance program in HVAC systems and air ducts.

Denny Mahle, owner and operator of Mahle Cool Air had this comment about the new service offering, “While most people are primarily concerned about maintaining a cool and humidity-free air in their home, many do not realize how much mold, fungi and other biological contaminates can build up in their air ducts. The new fogging system allows our certified technicians to safely control these harmful agents. By fogging the air ducts, home owners can expect improved air quality free of airborne mold and bacteria. Having clean fresh air indoors is especially important for those with respiratory issues or who are sensitive to allergens.”
