

Wondershare Recoverit 8.0 New Product Release With Advanced Features

NEW YORK, N.Y., May 29, 2019 (SEND2PRESS NEWSWIRE) – The latest update of Wondershare Recoverit 8.0 has been released with new and improved features. The application now provides a more intuitive user-interface and an improved data recovery algorithm. It has also expanded the supported devices and file types to make sure the tool would need the growing needs of its users.

The banner features the Recoverit logo in the top left corner. In the center, there is a white box with the text 'Recoverit 8.0'. Below this, the text 'Recoverit 8.0 is Live Now' is displayed in a large, bold font, followed by the tagline 'recover data with higher success rate'. A white button with the text 'WHAT'S NEW?' is positioned below the tagline. On the right side, there is a 3D illustration of an open blue box labeled 'Recoverit 8.0' on its side. Inside the box, various digital devices are shown, including a laptop, a tablet, a smartphone, and a camera. A small figure of a person is standing next to the box, pointing towards it. The background is a dark blue gradient with some light effects. In the bottom right corner, the slogan 'Recoverit. Regain it.' is written in white.

Send2Press® Newswire

Recoverit by Wondershare is one of the leading data recovery tools of the present time, which works on both Mac and Windows PC. The last version of the tool, Recoverit 7.0 was widely recognized in the industry for its high data recovery rate. Recently, the brand has come up with the new release of the tool – **Recoverit 8.0**. It features a wide range of advanced data recovery options that expects to further widen the reach of the application in the industry. Furthermore, it will meet the growing demands of its existing user, letting them upgrade to the new version for free.

What are the new features of Recoverit 8.0?

It is important for every major application to improve and add new features with time. Recoverit by Wondershare is no such exception as the company has recently released an updated version of its data recovery tool. Recoverit 8.0 provides a simpler, faster, and more efficient way to perform [data recovery](#) operations on Windows and Mac systems.

Following are some of the latest updates of the tool:

- **Intuitive and friendly interface**

One of the major flaws of Recoverit 7.0 was the home screen that asked users to select a recovery mode. There were times when users were not sure how they have lost their data. To overcome this issue, Recoverit 8.0 has come up with a simpler and intuitive interface. The application will display a list of all the prospective locations to perform data recovery. Users can just select a location of their choice and start the recovery process.

- **Faster Data Recovery**

Recoverit 8.0 works on a highly sophisticated data recovery algorithm that is known to yield quick results. Compared to Recoverit 7.0, the results would be a whole lot extensive and processed in less time. Recoverit 7.0 used to scan data in different modes like quick, deep, etc. On the other hand, Recover 8.0 would perform a more thorough scan right from the start.

- **Pick any location**

The smart interface of Recoverit allows its users to pick any location of their choice to scan. The interface will already list all the major locations on its home. Though, users can simply browse to the target folder or directory for a specific scan.

- **Extensive File and Device Support**

Recoverit 8.0 also supports a wide range of devices and file types, improving the overall compatibility and success rate of the tool. For instance, users can now even [recover raw files from hard drive](#), USB drive, etc. that aren't recognized by Windows/Mac. Furthermore, recovery from GoPro, drone cameras, and numerous other external sources is also extended.

- **Better Preview and Classification**

While Recoverit 7.0 would classify the results on the basis of data types (like photos or videos), the latest version provides a better option. It would classify data on the basis of file systems (like FAT32, NTFS, or APFS) instead. Also, users can now preview the recovered data in a better way through bigger windows.

With the release of Recoverit 8.0, the brand expects to propagate its

presence in the data recovery industry even more. Nicole, who is one of the recent users of Recoverit 8.0 said – “Recoverit 8.0 is so much better than the previous version. In less than 30 minutes, I was able to get back my lost data, which would earlier take a lot of time. I would recommend every existing user to upgrade!”

Since Recoverit offers a free lifetime upgrade on its products, the existing users of Recoverit 7.0 can upgrade to Recoverit 8.0 easily. Also, people who have lost their data and are looking for a recovery tool would also be benefited by this new and advanced solution.
