

World's Largest Digital Steganography Database Expands Again – SAFDB Now Contains Over 1,125 Applications

FAIRMONT, W.Va., Dec. 3, 2012 (SEND2PRESS NEWSWIRE) – Backbone Security is pleased to announce the release of the latest version of their Steganography Application Fingerprint Database (SAFDB) which now contains over 1,125 steganography applications.

Developed in Backbone's Steganography Analysis and Research Center (SARC), SAFDB is the world's largest commercially available hash set exclusive to digital [steganography](#) applications.

The database is widely used by U.S. and international government and law enforcement agencies, the intelligence community, and private sector digital forensic examiners and network security professionals to detect digital steganography applications on seized digital media and within inbound and outbound network traffic streams.

Discovery of a steganography application during a digital forensics examination is a strong indication the application has been, or will be, used to conceal evidence of criminal activity. Detecting a steganography application in the inbound network traffic stream is a strong indication an insider will use the application to steal sensitive information.

SAFDB is an integral part of the Steganography Analyzer Artifact Scanner (StegAlyzerAS), a digital forensics application, and the Steganography Analyzer Real-Time Scanner (StegAlyzerRTS), a network security appliance that detects the presence or use of steganography in the inbound and outbound network traffic stream in real-time.

The logo features the word "News" in a large, white, serif font. Below it, the word "from" is written in a smaller, white, italicized serif font. Underneath "from" is the text "Send2Press®" in a white, serif font, followed by "Newswire" in a smaller, white, serif font. The entire text is enclosed in a blue rectangular border. The background of the logo is a dark blue, abstract pattern resembling a network or a globe.

Existing customers may download an updated version of StegAlyzerAS and StegAlyzerRTS that contains SAFDB v3.15 by logging into their account on the SARC Customer Portal at http://www.sarc-wv.com/customer_portal/ .

For additional information about Backbone's steganalysis tools, please visit the SARC web site or send email to sarc@backbonesecurity.com.

About the SARC:

The SARC was established to create and maintain a national repository of digital steganography applications, fingerprints, and signatures that can be used during forensic examination of seized digital storage media or when monitoring network traffic for malicious insider behavior. The Steganography Application Fingerprint Database (SAFDB) is the world's largest database exclusive to digital steganography applications.

About Backbone Security:

In addition to being the leading provider of [digital steganalysis tools](#), Backbone is a Payment Card Industry Data Security Standard (PCI-DSS) Approved Scanning Vendor (ASV) that conducts automated PCI-DSS compliance assessments with their industry leading One-Stop PCI Scan service. Backbone also provides real-time intrusion monitoring, vulnerability assessment, penetration testing, and business continuity and disaster recovery planning services.
